1. Anyone going to Dayton to look at the FT1D?

Yahoo group: FT-1D
Date: 2012-05-15 17:39:15 UTC
From: ka1mzy
Topic: 1 Message: 1

If so, can you post a report, pictures and any extra info from Yaesu here for us that can't go?

They are real hush about the details on this radio!

2. FT-1D appears to not be P25

Yahoo group: FT-1D
Date: 2012-05-18 17:17:50 UTC
From: ac0wa
Topic: 2 Message: 2

My friend just text me from the Yaesu booth at Dayton. He said the FT-1D does not appear to be P25. He tested the FT-1D display model against a Bendix King DPHx5102x P25 radio. The BK radio would not decode the FT-1D and the FT-1D would not decode the BK. And according to Yaesu's brochure it's not TDMA either. He said it looks like they went with a proprietary protocol.

3. Re: FT-1D appears to not be P25

Topic: 2 Message: 3

Ok so another proprietary mode. *Sigh*

Well, maybe Yaesu will have some success with it and it will reduce some ICOM prices. To me it would have made much more sense to make them all talk to one another.

Thanks for the report from the Convention!

JP

From: ka1mzy
Topic: 7 Message: 8

Very nice to see. This one seemed to take longer than usual. But maybe it was because I've been watching it.

The Universal Radio website has been updated, but still not showing any pricing.

10. Message Posting Error Being reported

Yahoo group: FT-1D
Date: 2012-08-15 02:13:55 UTC
From: FT-1D-owner@yahoogroups.com
Topic: 10 Message: 10

A member is advising of a posting/reading error on the forum where they can't post or read messages. This is being researched and yahoo will be contacted if there is a problem with the group. Please let me know if you are having a problem on the board so we can get it fixed.

JP

11. Re: Message Posting Error Being reported

Yahoo group: FT-1D
Date: 2012-08-17 23:42:22 UTC
From: ka1mzy
Topic: 10 Message: 11

K7MDH notified me of a message error recently where messages could not be read. This apparently affected the whole group but I had no idea there was a setting incorrect on the group. It most likely contributed to the lack of messages being posted.

Everything should be working fine now where messages can be freely read. If you have noticed no-messages listed on the forum, it was because of a setting that was in place, incorrectly.

Everyone should be able to read all messages now at this point.

Thanks K7MDH !

That would be some good info. Usually, with that price, we can estimate it with conversion and typical price ranges of new HT's.

Any idea what kind of Digital format going on? Is Yaesu going to try to coin their own system now?

We started toward the "Cliff" with FDR. No informed person was
surprised that we finally ran out of road ...

$550. for a 2/440 handheld just as below $55. 2/440 handhelds
have flooded the market?

There are some neat features but they will never make major
inroads into the market until they offer something a whole
lot cheaper than that!

I suppose new technology is always expensive & if Yaesu can
get others to follow their lead, something Icom has failed to
do, then competition will build a user base and lower the
cost to play.

Actually, Yaesu is using a technology that has been growing for a while
in the huge commercial/public service market:

http://wiki.radioreference.com/index.php/Project_25

Project 25 Phase I FDMA

Phase I FDMA consists of C4FM modulated signal or a CQPSK modulated
signal. Both fit in a 12.5 kHz channel. Subscriber equipment transmit in
C4FM. Site equipment may transmit in C4FM or CQPSK. CQPSK permits
simulcast operation. Harris and Motorola offer simulcast equipment.
Motorola's brand name for simulcast is called LSM.

http://www.falcondirect.com/digital/differences/

APCO-25 (C4FM and CQPSK)

More commonly known as P25, this is the digital standard selected by
U.S. Government agencies and presumed by many
to be the platform best suited for all public safety users. The purpose
of P25 was and is to provide a common platform
offering the highest level of interoperability while simultaneously
addressing the need to move to narrow frequency channel
spacing. On of the best overviews of P25 has been prepared by Aeroflex,
a test equipment manufacturer offering equip-
ment for the servicing of P25 equipment. For additional information,
click here. Technically, this is known as C4FM,
compatible four-level frequency modulation) in a 12.5 kHz channel or
CQPSK, compatible quadrature phase shift keying)
in a 6.25 kHz channel.

FDMA (4 Level FSK)

FDMA is a new commercial digital standard jointly developed by ICOM and
Kenwood to provide the ability for a radio to
function in either a digital or analog mode at 25 kHz, 12.5 kHz, or 6.25
kHz. Technically known as Frequency Division
Multiple Access (4 level FSK), it is currently the most flexible and
affordable platform available for VHF or UHF systems.
Additional information is available by clicking here.

Hopefully you are right. According to the Yaesu leaflet, it is 12.5khz bandwith, with motorola, vertex and hytera etc being 2 x 6.25 khz..
It would be good if it works with Motobro...As far as I can see, the FT-1D does not conform to the DMR air interface.
Also project 25 is a completely different kettle of fish, and mainly USA only. The Yaesu being an amateur radio, I assume it should work world wide.
I suppose until we see one, we cannot know for sure. Also, unfortunately, although Moto. Vertex and Hytera are all DMR, they only just about talk to each other...
I shall stick to D-Star for now...
Happy New Year and all that...

Topic: 23 Message: 23

If any of you folks are going to Dayton next weekend, please press the Yaesu folks for more info on price and availability of the FT-1D and please post their response (or non-response) here on the board.

With the very quick and recent intoductions of the FT-252 / FT-257 HT's and the FTDX-1200 for HF bands, they appear to have dropped emphasis on the FT-1D and mobile FTM-400DR. It's been a long time since they both got FCC approval, and a very long time since they were announced. It does seem like it's time to either ship it or forget it.

Richard

Could it be that the cheap Chinese X1M, and expected follow-on rigs,
has thrashed their profitability margins (price competition plus
fewer likely buyers)?

One has to think that all of the traditional manufacturers are
taking a hard look at new products in light of this leading-edge
of a tsunami of cheap rigs.

One US Ham has a DC-daylight multimode rig planned for 2014 that
will sell for $200. as a kit!

The synthesized vfo chips, RTL-SDR receiving devices, and other
cheap chips & digital readouts from Chinese and Texas Instruments
sources are likely to transform the Ham rig marketplace.

IMHO, YMMV ... 73, David KD4E

Or could it be that they finally realised that pushing out a hand held and a mobile radio does not make a digital radio system? Not a whisper of repeaters, supporting infrastucture or integration with other systems...

Despite the cheap kit you mention, the ID-31 sold well and I gather the ID-51 is going down the same path. Hams will always pay for innovation, technology advances and experimentation provided they are not looking at an immediate dead end.

On Universal Radio's website, the FT-1D now shows a list price of $660.00 and a sales price of $539.95. This is the first time I've seen it listed in the US.

It shows both a black and a silver case version.

Availability is not mentioned, so it may be now.

Richard

Is the top graphic here actually displayed on the FT-1D?

Camera-mic option isn't yet available & no specs yet.

Is there a dongle for a PC, as for D-Star, that would broaden the capacity to access the Yaesu digital mode (at least on the receive side)?

If the only way to participate is to buy a FT-1D this could be a really tough slog to sell in this market.

I've not kept up with the conversation here so some of this may have been previously addressed.

A correction to my first post - the Universal Radio website shows availability as June 15, 2013. (but it was in small print, and these old eyes of mine ...)

At www.yaesu.com they have added the FT-1D as a product listing, and some manuals and a better brochure than I've seen before are available for download.

Time to start reading and figuring it all out ....

Hi,
If the "digital" signal was something like GMFSK, it would as it is an audio signal. With true digital TDMA, FDMA, D-Star etc , I believe you would need a digital repeater to suit. If Yaesu had gone 6.25 khz bandwith you could use Icom Idas or Kenwood Nexedge. FT1D is 12.5khz so not an option..Motobro is TDMA..Not suitable.I could be wrong...Discuss !!

Is it approved for the USA?

Is it compatible with DStar or Yaesu protocols?

FT-1D sales would be enhanced if it could communicate with
less feature-rich inexpensive digital handhelds.

> Howard Small wrote:

I spotted a discussion group here:
http://groups.yahoo.com/group/S780/Kirisun

Details:

http://www.409shop.com/409shop_product.php?id=111989

KIRISUN S780U The transceiver is a micro-miniature multiband
FM transceiver with extensive receive frequency coverage,
providing local-area two-way amateur communications along with unmatched
monitoring capability

Product Features:

Excellent noise suppression, digital voice clarity

Digital / analog compatible analog devices to ensure a smooth transition

Ten million sets of figures key voice encryption, safe and secure

Digital intelligent signaling, richer management scheduling function

Function Description:

1, FDMA frequency division multiple access technology, spectrum
efficiency improved several times;

2, support digital mode, analog mode

3, the digital voice encryption

4, a variety of call mode, all call, group call, a call, emergency call

Don't think it is FCC, but it is CE. Great little radio, great price. Not compatible with Yaesu or Dstar.

We have tested a few here in UK. Only drawback for Ham use is that they are memory only, no vfo mode.

Another repeater up the tower...Won't be any space left !

Unfortunately Kirisun is dPMR (6.25khz) and the Yaesu is not..It is 12.5khz. Kirisun make good radio's, at a good price. Yaesu seem to have gone off in their own direction. The FT-1D appears to be using Phase 1 P25, the most common digital mode in US. Unfortunately Phase 1 is being "phased out ", and replaced by phase 2, which is not backward compatible.

Difficult to test here in UK. Not much P25 available and definately no FT-1D yet !!!

When Icom launched D-star in UK, they did some cracking deals on D-Star repeaters. Shame it is so expensive...

As the Chinese manufacturers come up with cheaper gear, more digital modes will take off. Unfortunately Yaesu and Icom hate each other...

People need to see if there are any phase 1 repeaters going cheap on e-bay !!

It may be that it is compatible with DMR in peer to peer mode where DMR reverts to 12.5 KHz channels but that will not make it compatible with DMR repeaters.

Hi Reese,
Did they say that it matched any existing system ? As I said in an earlier posting the spec is closely related to Phase 1 P25 (6.25khz audio 6.25 khz data).
Will you buy one ?

Recv'd my FT1D last week...black version. I have manually programmed 2,440 rptrs and simplex freq with ease. Also included are 6mtr 220 for recv. I have alos listedn to FM broadcast radio, but have not yet tried sw bands. I have worked a few local stations on digital mode..on simplex freq. The xmit and recv audio is quite similar in sound as P25. While not compatible with P25 the recv and xmit audio sounds very smooth and not robotic, as is the case in other digital modes.
APRS function works flawless, pop-up messages on screen is a nice feature. I understand Yaesu will be introducing mobiles shortly with then rprts lastly.
I also understand that RT Systems is in the process of writing code to be able to program this ht with there software. While I did not find any issues manually programming the ht, am sure it would of went faster if I had the program.
I presume more folks with interest in trying something new and different as opposed to the same old same old will find this ht packed with features, functions, performance and quite reasonably priced for what you get in one small well made package.
While there will always be people who do not want to try a different mode, and nothing different; one thing that makes ham radio fun is trying new modes, new radios new antennas new bands new ideas to keep the hobby fresh and interesting.

55. FT-1DR Status

Yahoo group: FT-1D
Date: 2013-07-09 10:39:56 UTC
From: Dennis Griffin
Topic: 55 Message: 55

Greetings to the group,

I learned 7/6 AM that GigaParts recently received enough FT-1DR's to fill their standing orders and had enough left over that I could order one. Just wondering if I will be the only OM in the Phoenix area with one, once mine shows up. I hope there will be some more early adopters in the area so we can try the digital modes in simplex. I bought this radio not so much for the new digital features, which I realize that I may not be able to use much for a while, but more as a next gen VX-8DR/GR as far as APRS capability & features go. From a cursory review of the owner's manual, it looks good in that regard. Looks like I may become the forty somethingth member of this group, once approved; let's hope it blows up soon.

Hi Oba,

I too am anxious to see (hear) how the digital audio sounds on these units. What little I've found to read on this topic has been positive. My unit arrives today. So far, I don't know of anyone in the Phoenix, AZ, USA area that I'll be able to reach using a digital mode on simplex.

I have noticed that many of the members of this list have incomplete profiles showing in the member section, so it's not possible to see the QTH of these members. I would like to make a plea that members of this list please amend their profiles to show their area of residence.

Dennis,

Thanks for your reply. By the way, FTM-400D will start on sale at mid August in Japan. The MSRP is 84,800 JPY. It is a bit more expensive than I thought.

60. Micro SD card FYI

Yahoo group: FT-1D
Date: 2013-07-14 19:15:46 UTC
From: Dennis Griffin
Topic: 60 Message: 60

I just inserted a new 32GB SanDisk Micro SD card into my FT1D. I'll share two observations regarding this. Using a thumbnail that is overdue for a trimming, I wasn't able to seat the card, or, in other words, get it to "click" into place; I resorted to using the edge of a penny to do this. Once properly seated, I powered on the unit. Immediately after doing so, the card icon in the display, which is adjacent to the battery level icon, began flashing, along with the green B band LED. This continued for a minute or so, with my call signs (w & w/o SSID) remaining displayed, which essentially means the radio is locked. This lead me to wonder if this was correct behavior, but I decided to wait it out. Page 24 of the owners manual implies that an SD card that hadn't been formatted in the HT previously would have to be formatted using the Format menu function in Menu 10, once the card was inserted. Powering on the unit apparently self-executes this function, but I found no mention of this in the manual. The process did finally complete, w/o my intervention, after what seemed like a very long minute, since I wasn't expecting this. Out of curiosity, I powered the HT off, then back on, leaving the card in. The HT powered up normally, with the card icon displayed solid. So I initiated the Format function of Menu 10, and the green band B LED and the card icon once again flashed for about a minute before completing the formatting process and allowing the HT to return to normal usable status. Since this was with a 32GB card, I would expect the process to go quicker with smaller capacity cards, but I want to let new owners know to expect this undocumented behavior.

One other observation is that there is an error in the base owners manual on page 72, having to do with changing the GPS display screen to be able to see the current time. The manual states that the A/B button should be pushed to scroll the display up one line so the time is visible. This has to be done by turning the knob, not by pressing the A/B button.

Hi all,

the digital audio sounds excellent, comparable to APCO P25 sound.
No big difference between "wide" and "narrow" modes, but just great.
Probably not much of error correction there, mobile tests will show how robust the waveform actually is.

Hi Evan,

I'd love to try you on digital simplex, but I don't think I'd make it from Phoenix. I've asked that members of the group please complete their group profile with at least the general area they live in, but few have. We are like islands with these radios, where the digital side is concerned, when there isn't anyone else in our area with one that's willing to admit it.

I almost wish I hadn't seen your post because of what you paid for yours. I paid $525.95 for mine from GigaParts just over a month ago. Seems the price dropped a day or two outside of the 30 day price protection BuySafe program they offer, and they didn't even want to talk about any kind of concession. Sure, I can return it, for the current selling price, less a restocking fee, so instead of the $80 I've already overpaid, compared to having waited a few more days to place the order, I'd be throwing away another $150 or so. So they have seen the last of any purchases from me, which have amounted to about $3K in the last year. And I was close to ordering an IC-7100 from them. Oh well, live and learn.

Well if you're ever up in Oregon, please get a hold of me and we'll try it out. :)

I've been messing around with my FT-1D since last night, and honestly at $425 this is a really nice radio even if you omit the digital side of it. I got it mainly for APRS, and figured if Yaesu's digital system became a thing I'd be ready for it. The GPS & APRS configuration is really nice. And I really like that it can accept Micro SD, with the option to back-up GPS and config data. Still not crazy that I can't mute the APRS transmission sound, but I'll live. (Maybe a firmware update will solve this)

And I agree, we truly are like islands right now. But I guess that's what we get for being fairly early adopters. Hopefully Yaesu will release some firmware that will allow it to do digital modes that'll be more appealing to the average amateur enthusiast.

To any Oregonians reading this, I am in the Willamette valley!

73. Memory Bank Setting

Yahoo group: FT-1D
Date: 2013-08-17 12:17:56 UTC
From: William Welch
Topic: 73 Message: 73

Just got mine from HRO for $429.95 and free shipping.

Trying to program some memories but have not figured out how to set a Bank on a memory. It was easy enuf to program a memory but how to add it to a bank. I'm missing the non-existant software already that I've used for my other radios! Anyone done this?

Another note - HRO sent a catalog and it has a picture of the FT1DR but the buttons are different than the real radio....must have been a pre-production radio in the advert.

Figured out how to set a bank....just like setting a memory except you keep spinning the dial past the memory numbers until you get to the bank numbers. Pressing SET also jumps the memory numbers 100 at a time or jumps to next group of memories, scan limits or banks.

Thanks Oba, but I'm hoping to find some evidence of the new price appearing prior to 8/7/13, which would mean I could take advantage of the 30 day price protection guarantee. Where did you see that it is coming with a larger capacity battery pack? I find no indication of this. They have always offered the FNB-102Li, at 1800 mAh, for the VX-8 series, which also works on the FT1D, but the standard size for the VX-8 series & initial FT1D has been the FNB-101Li at 1100 mAh. Please post if you've seen otherwise.

Hi, Dennis,

You are right. It is equipped with FNB-102Li.

You might want to look at this page
http://www.cqcqde.com/shop/342_19940.html
though it is Japanese.

It looks like this may be a Japanese only package, at least at this point. Oba, if you've seen this package available outside Japan, please let us know!

As far as KD7CAC price drop guarantee, the price drop didn't occur prior to August 13th or 14th, so there. I know because I almost bought one used on the 13th and price checked the rig. The price dropped the next day.

Plastic bag, with a cardboard strip lining the molded internal packaging cavity that would have accepted the traditional PS box. Curiously, the PS head casing is identical to that of several other HT PS's I have from Icom & Yaesu, all of which are 12VDC output, though the SAD-11B is 10.5VDC at 1.0A. The PS for the CD-41 rapid charger is 12VDC, but only 0.5A. Weird.

There is a neat app called Swype which makes writing on a Android
(don't know about Apple) phone easier - and it includes a voice to
text option.

It sure would be nice if upscale HT's like the FT-1D included this -
or would allow a phone to serve as the an external input source using
something like RemoteDroid.

I'm guessing that the use of Android adds expense so maybe they
could use open-source TIZEN which can port Android apps.

Scott,
I am the person whom sold you the FT1D that you have. If you read the manual; it clearly states and shows what is being shipped with the radio. I am not sure where you are getting the "supposed" to ship the "PA" version, but Yaesu tech support also concurs with what it stated in the manual. I hope at least you're enjoying this fine Yaesu product.

89. List of Feature Questions ...

Yahoo group: FT-1D
Date: 2013-08-28 01:14:58 UTC
From: qrv@kd4e.com
Topic: 89 Message: 89

As the new price comes down this handheld becomes more
interesting to those of us on very limited Ham budgets.

I looked at the Yaesu, Universal Radio, & GigaParts sites
and still have some questions.

1. Can a text message be easily directed via APRS to a
text or email address?

2. Can a photo taken with the optional mic/camera be
sent as an attachment to a text or email address
via APRS? (Perhaps forwarded via a FTM-400DR
mobile set up as a cross-band repeater? BTW: Can
the FTM-400DR do cross-band repeat?)

3. Can an external QWERTY keyboard be attached to the
side data port?

4. Any chance of a dongle for C4FM digital mode similar
to the one for dstar?

5. I thought I heard or read that the FT1DR will scan the
local repeaters and store in/out frequencies, tone,
etc. automatically - is that correct?

Thanks!

David

There are three manuals that can probably answer some of your questions.
You can download them from the FT-1DR page, Files section at www.yaesu.com.

Hi,

I am not owning a FT1DR but I can answer some of your question.

1. Yes, this is part of APRS, not Yaesu specific! You can use APRSLink or the regular EMAIL to send email.
http://www.winlink.org/aprslink

2. APRS relies on AX25 unproto frames. That is, you can not reliably send large amount of data. The APRS network was not designed for such uses. Moreover at 1200bps this would take ages !

Sure appreciate your reply!

OK re. email and not pics via APRS.

It seems odd that answers to questions such as these are not
readily available on the Yaesu site - they'd be valuable
marketing tools to Hams.

There's no chance that I'll waste time plowing through three
manuals to find answers to pre-sales questions - that's the
job of Yaesu & their sales reps - who get paid to do so.

They desperately need a vastly improved FAQ page.

Besides, users almost always know more about rigs than the
sales people - indeed they often discover features and mods
the engineers didn't even notice were available.

I'll keep seeking answers to my other questions.

Thanks!

From: k7fos
Topic: 87 Message: 94

Wonderful. Thank you for the help. I didn't realize I had to hit the function key and then band. I only have one bank (right now) so I thought hitting the band button was enough.

Dennis,

As an 'Early Adopter' at least you got the pleasure of owning, using, and experimenting with your FT-1DR for a month longer than those who got the lower price. I always find that is worth something.

I've asked that members of the group please complete their group profile with at least the general area they live in, but few have. We are like islands with these radios, where the digital side is concerned, when there isn't anyone else in our area with one that's willing to admit it.
>
> I almost wish I hadn't seen your post because of what you paid for yours. I paid $525.95 for mine from GigaParts just over a month ago. Seems the price dropped a day or two outside of the 30 day price protection BuySafe program they offer, and they didn't even want to talk about any kind of concession. Sure, I can return it, for the current selling price, less a restocking fee, so instead of the $80 I've already overpaid, compared to having waited a few more days to place the order, I'd be throwing away another $150 or so. So they have seen the last of any purchases from me, which have amounted to about $3K in the last year. And I was close to ordering an IC-7100 from them. Oh well, live and learn.

96. Re: List of Feature Questions ...

Yahoo group: FT-1D
Date: 2013-08-30 00:07:51 UTC
From: qrv@kd4e.com
Topic: 89 Message: 96

GigaParts replied:

Q. Can an external QWERTY keyboard be attached to the
side data port? (For sending text messages.)

A) As far as I can tell, the FT-1DR does not support the ability to use
a QWERTY keyboard. This radio can send up to 80 character text messages
which the keypad on the transceiver is intended to be used.

Q. Can a cellphone be connected to the side data port
via a USB cable & used as a keyboard, external
storage, and/or to run various apps not native to the
FT1DR?

A) Yes, computers may be connected to this terminal to transfer data or
update the firmware of the radio.
The accessories listed for this device do include a cable that has one
end as a USB cable and the other end connects to a data port on the FT1DR
http://www.gigaparts.com/store.php?action=profile&sku=ZYS-SCU-18
I do not think you can hook a phone up to it.

Q. Is there any news of a dongle for C4FM digital mode
similar to the one for dstar?

A) No it doesn't, but I think it is a great idea!

Q. I thought I heard or read that the FT1DR will scan the
local repeaters and store in/out frequencies, tone,
etc. automatically - is that correct?

A) The FT1DR comes with various frequencies in it's memory making it
easy to call up stations at various communication services such as NOAA
weather channels and International Marine VHF.

Q. Can the mobile FTM-400DR be operated in cross-band
repeat mode?

A) The FTM-400DR does support Cross-band repeat mode.

100. Micro-SD Card

Yahoo group: FT-1D
Date: 2013-08-31 03:00:03 UTC
From: rbradioguy
Topic: 98 Message: 100

For those interested, I picked up a Micro-SD card for the FT-1D to play with to see what it does.
On the FT-1D there are four options:
 1 BACKUP
 2 MEMORY CH
 3 GROUP ID
 4 FORMAT
After formatting the card, I did 1, 2, and 3 sequentially.
Then I moved the Micro-SD card to my computer. This is the directory structure that it created:
 FT1D
  BACKUP
   BACKUP.dat - 128kb file
  GPSLOG
 GM
 MEMORY-CH
  MEMORY.dat - 41kb file
 PHOTO
 QSOLOG
  QSOMNG.dat - 1kb file
  QSOMSG.dat - 0kb file
  QSOMSGDIR.dat - 0 kb file
  QSOPCTDIR.dat - 0 kb file
  QSOPCTFAT.dat - 0 kb file

I looked at the BACKUP.dat file and the MEMORY.dat file with a binary editor tool (Free Hex Editor Neo). The files look pretty repetitive so it should be possible to eventually decode the format with a little experimentation. Or perhaps Yaesu will publish the formats?

101. SCU-18 cable driver

Yahoo group: FT-1D
Date: 2013-09-01 15:09:26 UTC
From: <k3zaa@...>
Topic: 101 Message: 101

Is there a driver for the serial-USB cable (SCU-18)? I can't get my cable to work with my Windoz XP box.

The radio has a connector similar in appearance to a mini-usb but it is not. It would seem that the radio is pure RS232 serial on a usb like connector. The SCU-18 I assume contains the Serial-USB chipset so the radio can be connected to a PC.

102. Re: [FT-1D] SCU-18 cable driver

From: <n9aa@...>
Topic: 104 Message: 104

Yaesu's new 2 meter/440 HT with analog and digital C4FM FDMA digital and analog operation with 4 power level with up to 5 watts output. Wideband RX from 500 kHz to 999 MHz (less cellular) including the AM and FM broadcast band. Solid AM band reception is enhanced with a built-in bar antenna. Other features include: GPS with logging and exchange function, mini-USB port, Micro-SD card port with a 4GB micro-SD card included.

This rig is in new condition and really hasn't been used. I'm just not much of a VHF/UHF op these days and I've got a couple of other HTs, so I don't need this one. $350 shipped, CONUS. Reply via email: mycall at arrl.net Hint: My call is N9AA

Thanks,
Scott

FOR IMMEDIATE PUBLIC RELEASE

Yaesu's complete System Fusion C4FM / FDMA Amateur Radio Digital Communication System was introducing to North America ham radio operators yesterday late afternoon at the 32nd Annual ARRLand TAPR Digital Communications Conference in Seattle, Washington.
Yaesu's FT 1DR Handheld and FTM 400DR mobile digital and analog dual band transceivers, already available, were discussed as well as a new key system components, the new DR-1 Dual Mode Repeater.

This conference is an international forum for radio amateurs to meet, publish their work, and present new ideas and techniques.
Presenters and attendees have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications.
Attendees frequently are Amateur Radio individuals experimenting at the very leading edge of the kinds of new technology that keeps Amateur Radio constantly moving forward.
It was our intent to show our respect to these individuals by launching the new Yaesu System Fusion C4FM / FDMA Amateur Radio digital communication system during their proceedings.

Yaesu encourage all interest parties to download the attached Yaesu Product Bulletin as well as our new System Fusion Product Brochure to acquaint themselves with its full capabilities.
We are certain that many will applaud the fact that System Fusion is "FM Friendly" meaning both Analog and C4FM Digital users can share one repeater and communicate with each other. With this one hugely important feature, Yaesu has shown their deep appreciation for their customers who for years and years have purchased their VHF and UHF Conventional FM Analog products. Yaesu's System Fusion provides an opportunity for a smooth transition to Digital for hams choosing to make that change without having to lose contact with their friends who may not be making the change at the same.

Yaesu will release additional purchasing and availability information to their North American Dealers in the next few weeks.
We fully expect there to be a large number of System Fusion repeaters on-the air-widely serving the Amateur Radio community by year's end!

Please join us as we celebrate this very important day in Amateur Radio history!

Thank you.

Best regards,
Dennis Motschenbacher K7BV
Executive Vice President Amateur Radio Sales

The software is good, as always, but the electronic download procedure is bogus. It forces you to burn a real CD. Then instructs you to keep track of it, as it's your only copy. Yeah, right. How 20th century ;-)

You do have to go through the tedious step of actually burning a CD. But then when you've finished, just use a utility and turn the disk into a .iso image. On the Mac this can be done with a command line. On a PC, you'll need to download software, as discussed in http://pcsupport.about.com/od/software-tools/a/create-iso-image-file.htm.

This process doesn't "steal the software," or any such nonsense. You still need a key from RT Systems, which is tied to the CD (and, therefore, .iso image) you created. But it does allow you to have an electronic copy of the disk, which you can back up as needed.

(Geek recommendation to RT Systems: instead of tying the serial number to an ID string burned onto the disk, just have the installer software generate a random GUID. The user could then paste this back to your server, and you could create a hash of it combined with the user's email address. You'd even have a record of it.

Oh, and if you did this, you wouldn't have to use the Rube Goldberg disk-creation process. You could just let the customer download the .iso directly.This creates no more of a security problem than your current method, as all the purchase info could be spoofed anyway, if someone wanted to steal and post your software.)

I purchased the software a couple days ago. It works great!. No timing issues or problems communicating with the radio/software. Yes the burn CD thing is weird but I was worried that it only lets you download 1 time but I had to download it about 5 different times because it kept being interrupted. They send you a serial number in your email for record keeping.

I didn't have to burn a cd because I used a program called Virtual CD and when its setup, the programming software will see the virtual drive just like a real one and I burned it to the virtual drive. Once inside the virtual drive I just told the VD to save in the .ISO format for backup.

Now do yourself a favor. I just spent $25 on this software. Now when you go to the Yaesu website under the FT1DR files section..... Guess what? a FREE ADMS-6 programming software that works.
Why didn't I just wait? *Sigh*

I have to say. The fact that Yaesu supplied a $70 pc cable and now giving the program software free is an indication that the chinese radios are putting some kind of pressure on the big boys.
Minus the usual $50 for cable and software makes the FT1DR a little bit better value.

122. FT1DR/E software beta testers

Yahoo group: FT-1D
Date: 2013-10-27 07:38:49 UTC
From: <bob.freeth@...>
Topic: 122 Message: 122

I have a beta version of FTB1D, a program to manage the memories and settings for the FT-1DR/E.

Would anyone interested in beta testing this please contact me direct.

73,
Bob G4HFQ

Yaesu has yet to release their repeater for System Fusion, unless there is one out there being tested/developed that we are not aware of. Coming soon in November I hear...pricing yet to be announced.

I had some time while traveling to set up my FT1D and get some APRS beacons out. It receives very well, and the display format of APRS stations is very well laid out. Some users that are less Tech-Savy (don't like complicated radio menu's) won't like the FT1D. It takes some time in the manual reading and experimenting to get it up and running. Once you have a working knowledge of the menus and required setup, and how to get into the menu to turn the GPS and TNC on, it works quite well. The GPS receiver itself could stand to be more sensitive, as there were many times that I could not get the GPS to get a position lock even though it showed 7-8 good strong signals, eventually it would finally get a lock near a large window with a large view of the sky. It's not super sensitive like most modern handheld GPS units, or even my Galaxy S4 which gets a lock even indoors, nowhere near a window.
The receiver is quite broad-banded and has very good sensitivity overall. Audio is very good considering the small speaker. I like the feel of the radio and the rubberized lower half that makes it easy to hold on to. The case is solid, being metal, and does not make the radio feel to heavy for it's size. I have held radios (other manufacturers) in the past that had plastic cases that would flex, squeak and such when you gripped it while pressing the PTT or pressing buttons. Not the FT1D. It's very solid, and of excellent quality.

Battery life isn't all that great with the supplied 1100mAh battery when using the APRS features (GPS and TNC on) as expected so plan on getting the optional 1800mAh battery if you're going to invest in an FT1D.
With the TNC on (APRS receive only) and GPS off it lasts noticeably longer. I have yet to use it locally on the analog repeaters in my area to give the battery a real-world test there. Will do that over the next few days.

Another local Ham friend of mine has the FTM-400DR and I plan on doing some simplex C4FM testing too over the next week or so.

As for the file I uploaded, it's in the FILES seciton here and it's a WAV file. I just tested it and it will download fine.

Did mine a few days ago on a Mac under Parallels 8 & Win 7. Battery off, using AC adapter for power & SCU-18 for communication. It did take a while. Powered off after, put battery pack back on and did the three key down power, then chose full reset. Next power on brought up enter callsign screen, and I was off and running after completing that. Loaded in 600 some odd memories after that & all is good.

Holding down Band key while powering on should bring up blank, dark screen. Pressing Band key again will turn on LED & show current firmware rev.

See relevant info on page 2 of the attachment, under Snapshot Function. From what I see there, it looks like the answer to your second question is yes. Also, Universal Radio shows JPEG as one of the three available formats.

Hi,

I just did and I also had the problems you describe. I sent an email to yaesu.

I think the problem is how you enter your callsign; Not sure on the good way, but it worked after the 3th time I did a full-reset & entered my callsign. You might want to press "band" to "fill" all the 10 spaces. I think that doing something else before the 10 chars (like saving your callsign) did cause my problems.

After that, I was able to check the version number with the band key.

Formatting the card in the radio does place a Photo folder on the card. I saved one JPEG & one TIFF pic in this folder, but they were 640 x 640 images. I found how to access them, while on Band A, in DM and in GM modes, but those two images didn't appear. I can only guess that they weren't found because they exceed the size that the radio can process.

I haven't played with the digital side of things on this radio since there doesn't seem to be a DR-1, or another FT1DR owning OM, anywhere near me, that anyone cares to reveal, anyway. For now, I'm enjoying the analog side of this HT & its APRS capabilities.

Don,

It is a compressed .zip file. Click on it using Windows Explorer and look for the Extract Files at the top of the window.

You can use the Folder Options applet in Control Panel to get Windows to display the file type of all files instead of hiding it. While you are at it also choose the option to always display menus. Makes things easier to get about.

I received the same charger with mine. It charges the battery just fine, and powers the unit w/o a battery attached during a firmware update. Don't know why you would think 10.5VDC output isn't sufficient to charge a 7.4VDC battery. The FT1D obviously has circuitry that allows it to properly utilize 10.5VDC or 12.0VDC sources.

Its not the radio that was the problem, it was the cd-41. The cd-41 requires 12-16 volts to work correctly. I have had lots of experience with commercial chargers and voltages. If it says it needs 12-16 than it may not work correctly on a lower voltage. If you don't give it the correct voltage it may not charge all the way or it may take longer to charge fully.

There was no mention of a CD-41 in the original post. The CD-41 is meant to be used with an NC-86B power supply, which was supplied with the VX-8R, DR & G models. No idea why they changed to the SAD-11B.

From: Steve Graham
Topic: 145 Message: 146

I think I understand your question. While in APRS mode on B band you can communicate on A band and APRS will work fine, you just may have to turn the mute feature on or turn the volume down on B band.

I hope this answers your question.

147. MIC-E transmission possible?

Yahoo group: FT-1D
Date: 2014-07-19 06:00:53 UTC
From: mike_sherwood@...
Topic: 147 Message: 147

Can the FT1D do a Mic-e (mic encoder) APRS transmission when I key the mic? I see no mention of it in the manuals. I do see the VX-8R doing some MICE-MSG stuff on the internet, giving me hope.

I would *love* it if this radio could do this.

Best regards,

Mike Sherwood, N5YXK

148. Bank Selection on Band B

Yahoo group: FT-1D
Date: 2014-07-28 22:59:30 UTC
From: w5mlm@...
Topic: 148 Message: 148

Greetings...

I have created multiple memory banks using the RT Systems software. I can select one of those banks using instructions from the FT1DR Operators Manual (page 49) when on Band A. What I can't do is select one of those banks when on Band B--turning the dial only shows the first Bank.

Anyone else have this problem?

My FT1DR has firmware version 1.08 installed.

73,
Mark W5MLM

149. Yaesu ADMS-6 programming SW question

Yahoo group: FT-1D
Date: 2014-07-30 05:35:16 UTC
From: don308@...
Topic: 149 Message: 149

Hello group,

Has anyone used the ADMS-6 software successfully? Please dont come back with an answer about RT systems SW. I'm not looking for that. That's all I find when I search the web.

I'm curious about how to display the memory channels and frequencies when I connect to the radio.
I can connect just fine. The first page is blank. I think memory location 1 has a home channel of 145.000 listed. Everything else is blank.
My radio has about 120 channels in it. I want to modify it and get rid of a lot of channels.
How do I display them?
I cant load from the data card using the pc either. It's grayed out.

Is there a manual for this SW? the help files show an index but nothing comes up when I click on them.

Anyone have any info about this?

Thanks..

Don.

I'm a bit confused here as to why you are asking about ADMS-6 on the FT1D group. Since you mention a data card, I'll assume you are working with an FT1D. However, ADMS-VX6 is intended to be used with the Yaesu VX-6R. ADMS-FT1D is needed for the FT1D. I have both and they each work fine with their intended HT's when used with the correct USB cable. Please clarify. Also, RTS does have good phone support.

ADMS-6 is what Yaesu calls the software for the FT-1D. The link to it on
their website starts off with "FT-1DR/DE ADMS-6 Software...."

ADMS-VX6 is RT Systems' software for the VX-6R.

Ah ha, that would clarify things. Leave it to Yaesu to defy convention and muddy the waters, not to mention that they apparently have two different communication cables for the FT1D. The screen clip below is from the RTS site. Sorry, but I have no idea where Don will find help with this programmer. From my experience, I wouldn't count on much help from Yaesu tech support in Cyprus, CA.

From: w5mlm@...
Topic: 148 Message: 153

Hey...

From what I found out from both Yaesu and RT Systems is that the latest firmware changed the relationship between memory banks and operating bands. It seems at first there was no relationship (as per the manual), but now the bank is dependent on which operating band is in use when adding memory channels into a bank. RT Systems is aware of the issue and is currently working on a solution. But for now it seems like all of the banks you define using the software are linked to band A, and only the first bank is linked to band B.

And this "new feature" wasn't mentioned in the Read Me for the firmware updater??? I haven't jumped on the latest firmware update, since I have no Fusion system repeaters, or any other FT1D users, that I'm aware of in my area. Looks like I should be glad for that!

I called Yaesu today to inquire about my problems with the ADMS-6 SW. They told me that it is buggy and don't even know why it's still on the site. He recommended RT systems SW.

So much for the free SW.

Don.

I had issues too with the free software. It was corrupting stored GPS locations for APRS. Yaesu Tech Support suggested I get the RT Systems FT1D Programmer software and I'm very glad I did. The software works very well with the radio. The only issue is with banks..but that's because Yaesu made some change in how banks work with the operating bands in the previous firmware release. RT Systems is currently working on an update. One feature I did not like with the programming software is that the global radio menu settings were stored as a separate file. You can however change that in the preferences so that they are store together with the memory settings (my preferred setting).

Mark...

Depends on what you want to do with APRS.

I use my FT1DR as a base, mobile, and HT, and as such I'm always looking for ways to conserve the battery. When I use it as a base I utilize the stored positions (see GPS tab in Radio Options Settings of the software) so that I can turn off the GPS and save some battery. I also set the beacon transmit to auto but have the interval set for 30 mins (see APRS Beacon tab). If you utilize Status Text then preprogramming those messages is very nice (also on APRS Beacon tab). Since I like to play with messages I preprogrammed some Message Text (see Messages tab) to use make sending an email to my wife much easier. Since you can only store 16 characters into 10 different slots I stored her email address and some small messages like "call me", "on my way", etc., so that it's quick to build a message. I didn't like all the pop-ups with APRS so it was easy to turn all those off (see APRS tab). I also turned off all the ringers but just a few.

The software is very nice. I just hope they update it soon to handle the current issue it's having with Banks and Operating Bands.

New FT-1DR owner here, and I also pulled the trigger on the RT systems software. The Yaesu-provided software is just too buggy. It wouldn't even let me program in odd-split V/U SO-50 satellite frequencies. It would only allow odd-split within the same band. RT systems had no problem with that. Now if only a club in the Denver area would get a Fusion system repeater up and going...

Howdy...

Yaesu has posted new firmware (version 2.00) and DSP software (version 1.07) and I just wanted to post that I haven't had any issues so far. The most difficult part of the update was trying to get around the Windows 7 security with the help file. If you open the help file and the contents are empty, exit the help application, bring up the properties on the help file and click the "Unblock" button. After that you can see the contents of the help file (and believe me...you want to follow those step-by-step instructions).

Hi Mark,

So, assuming that you have installed the latest available firmware updates from Yaesu, and knowing that you have previously had some minor issues with the RTS programmer, have you found that everything is playing together nicely now?

One way is the same way that you can check the firmware version, which is not easy to find out how to do. Power on with the Band key down. That puts it in an LCD screen test mode, which turns on (darkens) all the LCD pixels, the row of indicators across the bottom of the display and the white LED. Another press of the Band key gives the firmware version and activates the vibrator. The other way is described on p 129 of the regular owners manual.

165. Re: [FT-1D] New Firmware and DSP Software - cautionary FYI

Yahoo group: FT-1D
Date: 2014-08-03 03:08:10 UTC
From: Dennis Griffin
Topic: 161 Message: 165

Well, I decided to be brave and do the firmware & DSP upgrades on mine, which is one of the first batch sold in the USA. I first read the radio data to ADMS-FT1DR, V4.50.24, knowing a full reset is required after the firmware update. I went from firmware V1.08 to 2.00 and DSP V1.01 to 1.07. When done & verified, I reloaded the extensive memory file I had saved and found that Tx tone status' saved in the memories were active on the A side, but not active on the B side - unless the APRS modem is turned off. So it looks like someone has some work to do yet. Not a big deal for APRS users to beacon on the B side and voice Tx on the A side. I rather wish now that I hadn't upgraded, because I believe the firmware upgrade only affects DR1 & WIRES-X usage, and I don't have access to either.

Dennis...

I never did try using the B band to access repeaters while the APRS modem was on. I do know Yaesu locks-out tone/CTCSS when APRS is active on their other radios (VX-8GR and VX-8DR). This is the reason why Yaesu APRS users cannot use the APRS "voice alert" capability. Did tone/CTCSS work on the B band while the APRS modem was on before upgrading to 2.00?

I don't recall, but wish I had thought to check. I only knew mention of a B side issue, but didn't know the nature of the issue. The FT1DR is one of about two dozen HT's I own, and since no one else in my area will admit to having one, there are no SF repeaters here and I'm rather displeased with Yaesu, I haven't been using it much. One would think it would be easy enough for Yaesu to modify the firmware to allow selection of a handful of memories that were usable with the modem and allow all the rest to act on the B side just as they do on the A side. One could assume that their plans for System Fusion aren't going as well as they had hoped, since they dropped the price of this HT by about $100 shortly after introduction (right after I bought mine), and they now have a rebate on them.

Yaesu is working with clubs right now that want to move to digital--and I think they are giving them repeaters. Here is San Antonio I know of three Fusion repeaters with one more on the way. It's going to be a long hill to climb, and I'm glad they are doing it. My plan is to have a digital base and a number of digital HT's. I really don't plan on having too many QSO's with other folks on digital--I just want my family to be covered.

Lucky you, Mark. I haven't visited San Antonio since the late '60's, when I lived in Dallas & Plano; a visit there is on my bucket list. I've heard nothing of any current or planned SF activity in the Phoenix metro area. We do have reasonable D-STAR coverage here, and there are several MotoTRBO repeaters here also, which may partially explain the lack of interest in SF here.

I did check my VX-8R & VX-8GR and they both disallow Tx tones on the B side when the modem is on. They are both running on original firmware, and I've had them a while. I suppose I'll just have to stick with my TH-D72A's if I want APRS voice alert or want to Tx voice with Tx tone on either side. The FT1DR was likely the last Yaesu product I'll purchase. I had thought about selling my FTM-350AR and getting an FTM-400 - I'm sure glad I didn't, with the problems that one has apparently had.

The Yaesu FT1DR is my first real ham radio. I have a couple of BeoFeng HT's, but those were just starter radios. I looked at the Kenwood TH-D72A for a long time, but went with the FT1DR because it had more of the features I wanted (ruggedness, useful power settings, memory banks, spectrum analyzer, etc.). My next purchase will probably be that FTM-400DR to use as a base. Hopefully they will have all the bugs out of it by then.

Hi Martin,

DSP update is a separate process. There should be an additional piece of software called PCTool that was included with the download of the main software. That is the DSP update. No need to open the radio for that update! Just hook the radio up with the cable and follow the included instructions. Unless you have done that then I would not know why the DSP version would not change.

Good luck.

186. Battery/charging level display

Yahoo group: FT-1D
Date: 2014-09-08 02:36:38 UTC
From: w5dom@...
Topic: 186 Message: 186

I just received a new FT1DR from HRO. After a few days of general use, I noticed that the battery indicator on the display always shows full during use until it if fully drained at which point it just shuts off and the charging meter on the display always shows one bar until "complete".

Is this a known firmware, battery or transceiver issue? Is there a fix?

Everything else seems to be working as far as I can tell except maybe weak reception when compared to my FT60.

Thoughts? Any corrective measures or other creative problem solving would be appreciated.

UPDATE

I spoke with a Yaesu Tech Support rep this morning about the battery issue; second time in the last week regarding the poor antenna/reception. His short response was "I don't know", "that is just how they are", "Yaesu put inferior antennas on the FT1D", and his recommendations were to buy an aftermarket antenna and/or "send back to HRO, good luck with that". There was no offer to inspect my warrantied radio.

I was rather disappointed with the lack of technical support and sad to leave the radio with UPS for shipment to HRO. While I am not one to complain, I sent a feedback email to Yaesu at the behest of my wife. I'll let you know what I hear back if anything.

189. Stuck Transmitting...

Yahoo group: FT-1D
Date: 2014-09-11 01:31:58 UTC
From: w5mlm@...
Topic: 189 Message: 189

Greetings...

Has anyone every had their FT1DR stuck transmitting in digital mode?

Just curious. It happened to me a few weeks ago and it just happened to a fellow ham. We both needed to power off the HT to get it unstuck.

It's possible that it wasn't transmitting and just was hung with the red led glowing. I didn't hear his transmission so I'm not sure if he was transmitting or not.

73,
Mark W5MLM

190. V2.01 FW on Yaesu website 9/26

From: mail4tucker@...
Topic: 190 Message: 190

My FT-1DR came yesterday and I have been playing with it this morning. I noticed a new firmware version was posted yesterday (marked 9/26/2014). I checked my radio to see what it shipped with. FW 1.08 and DSP ver. 1.04. I'll be doing some updating this morning after I backup.

The change that was obvious to me was the way AMS is handled. There is now a manual mode. If you download the update zip, there is a PDF in there dedicated to describing the change to the AMS mode.

Topic: 197 Message: 197

Enter your vote today! A new poll has been created for the FT-1D group:

When your FT1D Automatic Mode Select (AMS) is set to "bar" +FM, does your signal reception audio intermittently cut out? Cycle the "Dx" button; refer to pages 31 and 32 of your manual.

From: Dennis Griffin
Topic: 198 Message: 199

Considering that I paid nearly twice the current selling price barely a year ago, it has likely killed any future Yaesu product purchases for me. I might have considered the difference as being my contribution to establishing a local Fusion system repeater, except there isn't one, nor or there any signs that there will be one anytime soon, though D-STAR is alive and well in AZ.

I don't suppose they are planning to sell many VX-8DR's for $30 above the new FT1DR-HP price, based on current HRO prices.

I have my LCD Contrast level set at 7 & my LCD Dimmer set at level 4 and don't see what you are describing, even if I run both adjustments from one end to the other. There are two slightly brighter areas coming in from the right where the display illumination lamps are, but they don't produce the pattern you seem to be describing. Maybe give it a day or two for the display to even out?

Hi Dennis!

By "display font" you mean showing just one VFO at a time, right? That's
the only way I've been able to make the digits larger.

As for Reading glasses? Hand magnifier?
Yes and Yes :)

Hi Brian,

No, not wearing my glasses and looking directly at the display with the backlight turned up to the highest setting. It's a slightly dark smudge at the top of the display toward the right-hand side.

Hi Dennis,

No, it's not the slightly uneven illumination at the right-hand hand from the orange leds, just a darker, smudge-like area towards the top right-hand area of the display, not that pronounced, could be a shadow-effect from some component behind the display.

John

Would you say the "smudge" is physically on the glass or does it seem like a faulty LED? My FT1DR appears to have three LEDs on the right with associated dark areas between them. With that said, it appears normal to me with no "smudge" like effects on the display illumination.

Hi w5dom, No, its not on the glass and its not the leds. The slightly darker smudge-like area is right at the top of the display towards the right-hand side. Its not that pronounced but I'm picky. Looks like it could be a shadow-effect from something behind the display, just mars the appearance of the display somewhat.

Sounds like the lcd is leaking. If so, it will only get worse. I would be taking it to the supplier to at least record the problem in case you later need a warranty replacement.

Hi Everyone,

David here, aa6rv.....I've been going through some of the older threads and see that some of you are upset over the major price drop. I can only imagine how upset you guys and gals are. I'm an avid DSTAR user and have been for a number a years. But also an overall geek....RULE #1....never buy the equipment when it first comes out.....I have one friend who has to own it right away whenever the latest DSTAR radio comes out....and he is on fixed income.....

Patience, Patience, Patience.....saved a fortune on this radio...it's now under 300.

So the first question: Is there a little box someone has developed that acts as a small repeater like the DSTAR DVAP? I see there is a box being sold for x-wire, but I don't believe it is a repeater by itself, but rather a way to hook up a radio to the internet and then you would use an HT to talk to the repeater....

73,

David, aa6rv

217. FT1D new firmware V2.04

Yahoo group: FT-1D
Date: 2014-10-23 15:37:11 UTC
From: bob.freeth@...
Topic: 217 Message: 217

If you have been considering installing or have installed FT1D firmware V201 then read on:

FT1D firmware V2.04 is now available on the Yaesu.com Files tab for the FT1D.

This version appears to fix a crash in the Yaesu ADMS-6 software V1.0.2.11 when reading a radio with firmware V2.01. The crash showed on the Settings window when decoding the LCD Contrast.

This is from the FT1DR V204 information PDF:

FT1DR/DE Main Version 2.04 (10/22/14)
• New Additional AMS Features. Refer to the Important change in AMS Feature.
• A standby beep function has been added to make a pip sound when the received digital signal has ended in a digital mode. The default setting is ON, but it can be turned off in the “STANDBY BEEP” set mode.
• Additional functions are improved and optimized.
NOTE: NOTE: When MAIN Software V2.04 is installed you must check the DSP Software version. If you do not have V1.07 DSP Software, then it must also be installed at the same time (otherwise it may not function correctly). Refer to the Help File to find how to check the Main and DSP software version.

Topic: 218 Message: 219

I've noticed it as well. I figured it was because I was monitoring some aircraft AM frequencies prior to
tuning to an FM repeater. The 'last mode received' was AM. It should switch back to iFM next time it
receives such a signal.

220. FT-1DR APRS Modem Speed Indication Flashing

Topic: 223 Message: 224

You are meaning the Callsign for APRS [Set 9 -> 12 APRS -> 23 Callsign (APRS)] and not the one used for the C4FM-issues [Set 12], right? Are you in the correct (APRS-)Menue for the input?

The dash will appear automatically after you put in the 6 figures of the Callsign (in your case the 4 with additional 2 blanks). Put in your Callsign and push "Enter" until you reach the dash - afterward you chose the desired SSID by turning the DIAL-knob.

226. ADMS-6 problems

Yahoo group: FT-1D
Date: 2014-11-13 03:53:54 UTC
From: wb1hbu@...
Topic: 226 Message: 226

Hello,

I downloaded ADMS-6 from the Yaesu website and found there is not installer. I "installed" it by copying the directories to my Windows 7 64 bit laptop and setting up shortcuts on the start menu. I installed the USB driver without any problem.

I tired running the program in the C:/Program Files (x86)/Yaesu directory, but the program had problems due to the UAC, i.e. I got errors when the program tried to write files in it's directory. I moved it to C:/Yaesu and things got a bit better. I was able to read the radio, add channels and write channels to the radio. I was able to save the file as current.ft1d without any problem.

The first problem is all the 927 MHz Ham Repeaters I programmed show up as 914.000 MHz on the FT-1D. All the other frequency bands programmed correctly. I tried to manually enter 927 MHz frequencies and even 935 MHz frequencies and the FT-1D rejects them. I looked at the specifications and it says it can receive that frequency range.

The second problem is when I ran ADMS-6 again to modify the file. The Open selection under the file menu is greyed out.

The third problem is I can reread the radio successfully, but the data does not display in the program window. The Untitled1 tab stays at the default values.

227. ADMS-6 problems with blocked frequencies was Re: [FT-1D] ADMS-6 problems

Yahoo group: FT-1D
Date: 2014-11-14 19:10:26 UTC
From: Eric Cottrell
Topic: 226 Message: 227

Hello,

I found the reason why ADMS-6 greyed out the open file menu selection and could not read the FT-1D. The radio and saved settings file contained blocked frequencies. It appears Yaesu had to block image frequencies as well, so the upper portion of the 900 MHz Ham band is blocked.

I reset the radio back to factory defaults, read the radio, and saved the settings files. This restored things back to normal. So do not program the following frequency ranges into the cellular blocked version of the FT-1D.

FT-1D Blocked Frequency Ranges
824.0000 to 849.9875
869.0000 to 894.9875
915.0000 to 943.9875
960.0000 to 988.9875

Yes and no.

If all you have is a ham radio that operates on FM and one digital mode (you choose - D-STAR, DMR, or SystemFusion) you will be limited to monitoring FM and that digital mode.

However, Connect Systems, Inc. (CSI) is bringing to market a new HT (model CS-7000) that will be able to operate on FM plus several different digital modes. That will help.

I'm seeing the situation you describe in the city I live in. Over the last 20+ years, the PD has gone from a conventional FM repeater on 154 MHz to an 850 MHz trunking system which is still on FM and which can be monitored with a ham radio having wideband receive. However, they will be converting to a P25 Phase II digital system next year which will make them unable to be monitored without a very expensive ($500+) scanner or an even more expensive commercial (Motorola) radio.

Thanks for the info, to tie it into the FT-1DR.. the reason I am looking at this radio is that it's analog and digital. Right now it looks like a battle to see which digital protocol will win the majority D-STAR, C4FM, DMR, etc... I was hoping that since this transceiver is digital it would be able to monitor everything digital in hopes I could buy one receiver for a wide range. That looks like it's not going to happen.

On a side note, I think the technology is out there that could, looking at all the tech they pack into an iPhone, but it seems it's not being done yet. The CS-7000 is a step, but it's not dual band.

The CS-7000 is far away to be a real step forward.

You have to understand that Yaesu's C4FM Is an open standard (unlike D-STAR and DMR and..) and therefore there is a "hope" that there will be some nice features and/or gadgets available in the future. I trust into Yaesu's System Fusion!

Open standard? D-STAR is an open standard but the thing that confuses many is the fact it uses an AMBE chip, which is proprietary. So does the FT-1D and many other digital radios.

I'm not sure what the concern is over the DVSI AMBE-3000 vocoder being "proprietary." Lots of components in radios (and other electronics) are proprietary. Unlike chips sourced by Yaesu, though, the AMBE-3000 is readily available in boards from third parties (like NW Radio), in a USB form factor from DVSI, and likely at the chip level from distributors.

Agree. This has been a thorn in the side of many D-STAR opponents who seem to be blind to the realities of chips used in radios. There is an open codec available for ham use nowadays but Yaesu still chose to use an AMBE chip. Presumably this is a reflection of the fact that there is an abundance of experience using these chips with contominant benefits in reliability and performance.

Hi Nick,

First off, please remember to sign your messages with your Call Sign.

Question - Are you using the wallwart that was shipped with the radio? If so, I do not believe that the wallwart has enough wattage to power the radio during transmit (should have been mentioned in the user manual).

Otherwise, you will need to check the power output of your external power supply and all wire connections to the radio.

Jim

Hi Denis,

Use the Dx key to put the HT in a mode other than straight FM before checking the DSP version. Selecting modes Auto FM (w flashing bar in front of FM), DN & VW will allow version to show.

Perhaps you missed my reply to Denis a day or two ago, wherein I offered this instruction: Use the Dx key to put the HT in a mode other than straight FM before checking the DSP version. Selecting modes Auto FM (w flashing bar in front of FM), DN & VW will allow version to show.

1. Set radio to A Band in digital mode 2. Go to SET RX/TX
3. Go to DIGITAL
4. Go to DSP Ver

That's it!

From: jadaugh@...
Topic: 257 Message: 257

Hello everyone.

I just bought a new FT-1DR yesterday. I also bought the RT systems software all from HRO.

The cable provided with the radio now is the SCU-19. The software does not get along with this new cord.
I found this out after calling the RT software guys. The only other options are 1. pay 80 bucks and get the SCU-18 cable (which was provided before) or program into a Micro SD card. I have tried the SD card route but the radio will not read the SD card.. The only way the radio will read the SD card is if the radio it's self writes to the radio then it will read from the radio.. I have ordered the SCU-18 and it is on it's way. I would think RT systems would keep up to date with cords. Now I have two programing cords. 1 which is usless.

Any advise on programing the Micro SD card so the radio will read it?

Hi Jeff,

Did you write the existing (new state) radio file to the card before introducing the card to the RTS software? Many programming softwares want to read the radio for config before being able to write a file to it. In this case, a radio data file on the card should be the same as cabling the radio to the computer, as far as the software to be able to determine the radio configuration.

Yes I tried all different ways. Formatted the card to the radio. wrote to/from card while in radio. also tried reading card (that works) in the software. When I write to the card from the computer it appears to go into the card. but when in the radio, the radio will not read it. I guess I will have to wait until the new programing cord ships from HRO. I see it is arriving out of Burbank store.

Don't be too hard on RT Systems. There is some "electrical difference" between the two cables, and Yaesu's choice to change cables isn't RT's fault. Apparently the newer cable has a different chipset that isn't as reliable. I don't represent them, but I'll bet they'll sort out the differences. I've used RT Systems' software for many radios and their support and quality are both top-notch.

I have used the free adms-6 software with the supplied cable and it
works quite well.

no as nice as the rt systems software but a lot less fussy about the
type of cable.

the rt system software has a lot more anti piracy stuff built in to it
that is why it
can only be used with a certain type pf cable's.

Hi Jeff,

If you want to meet up, I believe you should be able to read my card into your radio. That would get you going for now, and you could modify the file to suit yourself once you are set with the cable situation.

With a little work, I was able to use the 19 cable and CHIRP software on my mac to do a quick programming on the radio.

The key thing that took some time figure out was that I had to put the radio into clone mode, and then had to hit a button to tx (send the current programming to CHIRP) or rx (receive the programming from CHIRP)

I also had to get a daily build of CHIRP, the stable versions don't support FT1D

You're right, and a user pointed me to an error in clone instructions
message, I'll correct it in a while.

> I also had to get a daily build of CHIRP, the stable versions don't
> support FT1D

We are working for the next "stable" release but chirp is a very active
project and often offers new radio support and bug fix in daily build.
Consider that FT1D support is not complete with all radio settings yet,
keep looking to new daily release notes.

272. How can two separate PL tone freqs for Tx and Rx (sql) be set in this radio?

Yahoo group: FT-1D
Date: 2015-02-08 02:04:44 UTC
From: kv7i@...
Topic: 272 Message: 272

Hello all, I'm new to the FT-1D radio and new to the group! Some repeaters use two separate CTCSS tones, more so now that digital modes are being shared with analog on the same repeater. For instance, the San Diego SixShooters http://sdsixshooters.org/ KI6BJN repeater on Mt Otay, 146.910 MHz (-), PL 100.0 Tx - Rx 118.8

I have combed through the manual and found quite an array of combined send and receive signaling modes that can be used between tone, DCS, reverse, inverted, and PR, but best as I can tell, there is no way, no provision made, to set two different analog tone freqs! The closest mode is TSQL, which both sends and listens for the same tone freq. If anyone has discovered how to set two different ones, or can at least say definitively that it can or cannot be done, could you post a reply?

If it cannot be done, it would seem a huge deficiency and oversight in this radio's programming, since for all the other possible mode combos, this would seem to be the most widely used/desired! Would there be a way to communicate to Yaesu and request this as an added feature add in the next firmware upgrade??

I believe you are correct in that 1 memory cannot support separate T & R tones. But you can use 2 memories 1 for T and a second for R and use the “Dual Reception (DW)” (pg 75) function as long as you don’t need a Digital mode as Band B does not support digital modes.

Hello & thanks for letting me join. I have a brand-new FT1D that I'd like to make a few contacts with on the digital side of things so I can see how well it works. I'm in central Rhode Island and have been using the APRS with built-in GPS and I must say - it's a great combination! I'm really impressed with the GPS satellite sensitivity (5-6 sats indoors to 9+ sats outside).

If you'd like to make a contact, I'll monitor 146.52 (what's the actual calling frequency, if any?), you can send me a message on APRS (portable is N1MIW-7 or home is N1MIW), or just reply here. All I ask is please be patient with me - the FT1D knows more about digital audio than I do.

According to the manual, you're supposed to be able to read/send text (data) messages when you're grouped up...

Well, I can get so far as to the point it says to hit Function 7 to open the log... except function 7 doesn't work. No result whatsoever. Is this a feature that requires having a SD card in the handheld, or am I not the only one with this issue? I called HRO where I got the radio since Yaesu doesn't apparently have more than one person to answer the phone or something... and one of the guys there has a FT-1DR and had the same dead end issue as I did when he tried.

Any tips, pointers, adjustment for operator headspace and timing, would be greatly appreciated.

Thanks!

Yes, I had the same issue and was perplexed, but
tried it again after I put in a microSD card and
it worked, correct menu items appear, etc. It
apparently needs the card for working memory, so
the same applies to pics or any messaging.

Getting a SD card is a good idea.

I haven't messed around with the messaging feature yet, but while trying to program my radio with Chirp (I'm on a Mac), I've accidentally did a factory reset on the radio. How, I'm not sure but I've been able to duplicate it several times. What's saved my butt from starting over again was that I backed up all the settings & programmed frequencies onto the SD card! Just restored the info back!

281. Dayton Hamvention System Fusion Forum, Sunday, 5/17 @ 10:30 am, Forum Room #1

Yahoo group: FT-1D
Date: 2015-02-21 20:16:49 UTC
From: Mark Thompson
Topic: 281 Message: 281

The first System Fusion forum at the Dayton Hamvention has been scheduled.

The System Fusion Forum will be Sunday morning, 5/17 at 10:30 am in Forum Room #1
We understand that Sunday morning is not exactly an optimal time, but it will be a good start for the first forum.
We'd like thank the Hamvention & the Forums Chairman for making the time available for the forum since the forum was requested at a late date. We have been assured that future System Fusion forums will be scheduled on Friday or Saturday in a large room.
We will be working with Yaesu and hams active in the System Fusion community to schedule the agenda by mid-March.
We look forward to your attendance at the forum and if you would like to present at the forum please reach out to me directly as soon as possible.
In the meantime, you can learn more about System Fusion by joining the System Fusion group at: https://groups.yahoo.com/neo/groups/YaesuSystemFusion/info
See you at the Hamvention!!

I just did a “cut and paste”. You will have to identify and confirm the data into each field, but it worked fine. I used this method to put the same frequencies in my FTM-400, FT-1DR, and Icom 5100. All were programmed with ADMS software.

From: jtovet@...
Topic: 291 Message: 291

Hello all....

I'm really liking my new FT1D. I have a question however and I can't figure out the answer. I would think this should be so easy.....

Anyway, is there a way to turn the backlight on (not the bright LED) but the light that allows me to read the frequency?

It stays on for like 5 seconds and then go's off. I know it pulls on the battery and that's why it's on for such a short period of time but there are times I'd like it on all the time.

Any help is appreciated!

Hi Jim,

You can change the backlight duration in the Display -> Lamp setting.
"Continuous" is one of the options. Details are on page 105 of the manual
(that I have, at least).

Good luck!

299. FT1D Power Supply

Yahoo group: FT-1D
Date: 2015-03-02 00:52:10 UTC
From: Ron Wenig
Topic: 241 Message: 299

Hi Everyone,

I have an FT1D Silver. When I'm in the shack I connect it to an external antenna and connected to a 12 volt power supply without the battery.

I'm monitoring the sensor info and the readings are - Voltage 13.2 volts and Temp 113 degrees Fahrenheit. This is just monitoring on receive.

The back of the radio is quite warm to the touch and I'm wondering if this is not good for the radio. I'm saving for a FTM-400 so I don't have to leave the FT1D running. So is this normal temperature for this HT or should I do this.

From: Dennis Griffin
Topic: 241 Message: 300

The FT1DR only needs 7.4 VDC nominal to operate. By feeding it 13.2 VDC during operation, it is acting as a heat sink to dissipate the difference. Mine will run most all day with light TX on the standard battery. I would suggest operating off the battery and recharging overnight. Otherwise, turning down the power supply would help some, and adding a buck converter with its output set for about 8VDC would be better yet.

Thanks Dennis, good idea on the the buck converter. I usually use the HT on a daily walk I do so the battery is down a bit when I use it in the shack. So I wanted to use it with a power supply so that batteries don't run all the way down.

302. Scanning FM vs. C4FM

Yahoo group: FT-1D
Date: 2015-03-04 15:19:58 UTC
From: Brian Smithson
Topic: 302 Message: 302

I am *really* puzzled by something.

I have a number of repeaters programmed into my FT-1DR. All but 1 are analog, the last is a new SystemFusion repeater.

I can't figure out how to tell the radio that the mode of the SF repeater is digital - it seems I have to press the Dx button to hear/xmit digital. If I then move to one of the analog repeaters, the radio still shows "DN" as the mode and if I key up, I can only imagine I am sending digital noise to an analog repeater!

How to I set a memory I know is digital to digital, while the rest are analog, and scan them?

AFAIK, I don’t believe this is possible. Some would call this an Easter egg, others a fault.

RTS software only allows operating choices of AM or FM to be saved with a memory channel, depending on band segment.

It seems that DV mode has to be applied to a YSF repeater memory on a per use basis, when analog FM mode xmit isn’t desired.

It was a great question and the answer was exactly what I thought it would be. It should would be nice if the software would allow us to program the mode into each individual memory slot.

I've got two Fusion repeaters in my neighborhood so I programmed in 3 digital frequencies. Two are for the repeaters and one is for simplex. I then put them on a bank of their own and I scan that on Band A.

The rest of my memories are a combination of local FM repeaters with some Public Safety and airport frequencies added in. I set them up in their appropriate banks and then I choose a bank I want to listen to and scan it on Band B.

Sometimes I want to listen to local FM repeaters on Band B but also want to include scanning our local FD. In that case I can link the two appropriate banks together and scan them on B. It really works well.

Just my 2 cents.

Why can't you just set the mode as "auto", DN or FM with the little bar
next to it?

Topic: 302 Message: 307

Eric - i can certainly try that.

When I twist the memory knob to what I know is a system-fusion repeater and press PTT, what happens? FM or C4FM? I need to try it.

309. Re: [FT-1D] Scanning FM vs. C4FM

Yahoo group: FT-1D
Date: 2015-03-04 17:12:55 UTC
From: Brian Smithson
Topic: 302 Message: 309

I may have to go that route.

Right now I have just one 'big list' of repeaters ported from my FT-60. I've added the single YSF repeater to the list. My only option in RTS is AM or FM, so FM it is.

When I save the frequency on the radio it goes into memory as FM..

I set the mode to 'AMS.' I tuned to the YSF repeater and keyed up. It transmitted in FM - I guess it had no digital signal to 'hear' and pick DN. Now the icon has the little bar and "FM" next to it.

Your solution would fix this because all the analog freq's would be on the B side and I'd set the mode to FM. All the digi freq's (one, for me :( ) would be on the A side set to DN.

This is even more puzzling to me because while I was writing this message, the radio is parked on the YSF repeater and the mode has the little bar and "FM" which I think is AMS right? Someone just keyed the repeater and all I heard was the digital hash. I thought it would switch to DN?

Oh well, so much to learn.

310. Repeater list and APRS on 440?

Yahoo group: FT-1D
Date: 2015-03-06 13:54:45 UTC
From: James French
Topic: 310 Message: 310

Two questions here.

1) where can I find a 'current' repeater list of Fusion repeaters?

2) I have tried to do APRS on 440 with no success. It will not transmit up there at all, even in manual mode. Is there something I have missed?

From: rolandsimmons@...
Topic: 120 Message: 311

Hi Ed,

I was playing with google search tonight and came across an APRS message you sent to me. I didn't receive it on my radio though.

I do like the FT-1D. It has a lot of features. I try to make sure I have the manual with me when I use it just in case. It has a separate APRS manual that I downloaded to my cell phone for those times I'm away from my laptop.

I just figured out how to use the digi peater on the ISS this weekend. Went camping this weekend on the Oregon Coast and was able to catch a few passes of the ISS. Also caught a pass of SO-50 but just listened and didn't throw my call sign out there.

312. Aprs on 70cms?

Yahoo group: FT-1D
Date: 2015-03-12 22:18:17 UTC
From: James French
Topic: 312 Message: 312

I have tried to utilize aprs on 70cm this weekend with no luck. It won't transmit even when I manually (function - 0).

Is there something that I am missing or is the aprs limited to only 2m?

Also would like to know if there is anything for the digital voice in the Detroit area ? I don't do repeaters often so I have no idea what is up and around anymore.

I am mostly a VHF/UHF/MW rover a majority of the time and got the ft1dr instead of the Kenwood because of price and capabilities.

My chirp wouldn't work either until I downloaded the "daily" build. The stable release version will not work. Make sure you get the latest daily here: Index of /chirp_daily/LATEST http://trac.chirp.danplanet.com/chirp_daily/LATEST/

http://trac.chirp.danplanet.com/chirp_daily/LATEST/

Index of /chirp_daily/LATEST http://trac.chirp.danplanet.com/chirp_daily/LATEST/ Name Last modified Size Description Parent Directory - Model_Support.html 16-Mar-2015 00:06 327K SHA1SUM 16-Mar-2015 00:06 472 Test_Report.html...

View on trac.chirp.danplanet.com http://trac.chirp.danplanet.com/chirp_daily/LATEST/ Preview by Yahoo

I got both AMDS6 and chirp working rather quickly. I imported my .csv with chirp, loaded to the FT1DR then opened AMDS6 and read from the radio. Saved both files out and I now have either one to work with in either program.

314. APRS questions

Yahoo group: FT-1D
Date: 2015-03-17 12:52:52 UTC
From: carguy4471@...
Topic: 314 Message: 314

I finally got my new ft1 up and running on APRS. I had a couple questions though....

I was able to verify my packets were received by checking on aprs.fi. Is there a way to see if my APRS data was received by an igate on my HT? It seems like it received my own station on the HT, but once it was in the station list I didn't see it come up again?? How can I make sure via my HT my packets are received by an igate??

315. Re: [FT-1D] APRS questions

Yahoo group: FT-1D

Topic: 314 Message: 315

Hello Carguy,

I believe when you see your position come back on the FT1D display means you were heard by a digipeater and the packets were sent back out. To be seen on the APRS servers an IGATE would have to receive it also. The only way to find out is to go on one of the servers like APRS.FI and search for you callsign. If you are away from your computer you can use an APP on your smart phone like APRSdroid.

That's what I was afraid of. I am trying to figure out a way to ensure I've gotten within range of an Igate without having my phone or tablet with me. It's easy enough to check aprs.fi or aprsdoid on my phone but it would be nice to be able to confirm somehow that I hit an Igate without needing it.

It sure is interesting to see all of the stations that I pick up. Lots of folks around with APRS running.

It's probably because of the good deal on the FT1Ds and people saw the built in APRS function and turned it on. I hike a lot and if I'm talking to someone on the radio I'll just tell them to search for NY3J-7 to see my tracks. Lots of fun.

I almost had to factory reset my radio after I got it into this mode while experimenting with holding down buttons on power on. I can't find anything about this by searching for memory in the downloadable manual.

If you hold the V/M button while powering on, it puts it Memory Only mode. That is, both bands are in memory mode and they will not let you switch to VFO mode. Repeat to take it out of Memory Only.

Dennis and All,

I am now using a Drok regulator adjusted to 8 VDC without the battery
and it's working great. Stays nice and cool when I'm monitoring the
bands. Now I'm finding out that not all power connections are the
same. The battery charger connector has a yellow tip. I got a
connector with a yellow tip from Radio Shack and the connection is
loose. I had to slightly crimp it so it wouldn't lose the connection.
I guess I'll have to order an E-DC-6 optional cable. No warning when
the battery runs down. While I was in a QSO and listening to a reply
the radio immediately shutdown.

Hi Ron,

Good to know that worked for you. Check the plastic tip on the E-DC-6 by trying to pull it off. Those tips are known to be loose, and they can come off inside the jack. When this happens, it may not allow the HT to work off of a battery pack, because it holds a contact open. It’s better to have it come off in your hand, so you can glue it back in place before it lodges deep in the power jack.

Cheers,

Date: 2015-04-03 15:38:44 UTC
From: ozguroruc@...
Topic: 326 Message: 326

I have interested in encoding/decoding of amateur radio protocols. I have some problems Yaesu FT1D transceiver.

I have examined voice frames from recordings. I have followed Amateur Radio Digital Standards.

I obtain easily content of FS and FICH frames. According the FICH, data type of the recording is V/D type 2.

I followed VCH and VECH sections of Standard. I obtained 49 bit voice encoded data after processes of deinterleaving, dewhitening, decreation from 3 bit repeating. I have collected 49 bits over whole recording. But i didnt converted them audio signal.

Please give me the idea how i can obtain the voice of recording?

Thank you for your help in this matter.

327. Any UK owners received the Camera Mic yet ?

I sent my claim to Yaesu UK (including a cash back claim for my FT450D) and they received it on the 20th March and haven't heard anything since.

Has any other UK owner been notified about or received their claim yet ?

Cheers,
Mike G1ZRN.

Not sure about the UK, but in the US, it's been my experience that most rebates take anywhere up to 8 weeks before you receive it.

Thanks for the reply.

I suppose it could be the same here in the UK but a friend of mine put his claim in for the Camera Mic in January and still hasn't received one.

Hi Mike,

I just received an email last week from Yaesu UK, where I had send my application, that because of the high demand for this offer the mics are delayed and they will be able to ship mine in May.

This is a few weeks after I had posted my 2 requests, so I guess there is some good demand/success on this offer :)

Topic: 334 Message: 334

I got a vanity callsign after I purchased my Yaesu FT1DR. Every time I reprogram the radio with Chirp (on Mac), my old callsign returns when the radio is done reprogramming. Every time I have to change it from going to Display - 12 Callsign.

How do set it so I don't have to keep resetting my callsign on the radio?

Thanks.

I haven't used chirp too much with my FT1D but within the program, do you have to make sure your call sign is correct? If the program has your old call sign stored, it will just keep uploading it. Change your call sign in the radio again and then try downloading from the radio and see if that takes care of the problem

The callsign, with all other settings, is saved into the memory image; I suppose you reuse the image you saved before the callsign change to reprogram your radio.
After changing the call sign you can download a new image to chirp and save it for future use.

Topic: 186 Message: 348

While the behavior is frustrating, it seems a bit drastic to send the radio back for such simple reasons.

A new antenna, much better than any stock rubber duck, is available for around $20. For the battery, keep the radio plugged in, or swap it out when it dies. Other than these quirks, you'll be hard pressed to find a better radio for the money.

And, yes, the Yaesu techs can be jerks (sorry, Chris). I've found information from these Internet groups to be a good, and (usually) friendlier alternative.

I like the Diamond SRH-519 - I've been using them for years. It's about the same length as the stock antenna, but it seems to be better performance-wise. Sure, one of the longer antennas would perform even better, but I don't like to have an antenna tickling my armpit when the radio is clipped to my belt.

Also, the SRH-519 is thin and flexible, unlike the stock antenna and many other after market ones.

The FT-1D does NOT do “narrowband” channels, or at least not all of them. The frequency needs to be divisible by either “5” or “6.25” to be considered “valid” by the software. Some narrowband frequencies fit this criteria, others do not… (Many of the narrowband frequencies are divisible by 2.5.)

I’m thinking that the frequency you are trying to enter does not fit the criteria that Yaesu has defined, therefore the error.

I have a JetStream JTS2 that I originally bought for use on my VX-7R. When that radio died, I just moved it to the FT-1D and I’m VERY happy with it so far.

But understand; asking for a “recommendation” is like asking what is the better vehicle – Chevy, Ford, or Dodge. ;-)

I only have HT so have used other antennas to increase range. The Diamond SRH77CA (at HRO) is good both in my FT-60 and (current) FT-1DR.

But the Pryme AL-800 seems to have exceptional performance (though it's much longer and seems to me to be somewhat fragile. I'm careful how I handle mine).

I use Chirp. It's opensource, available for multiple OSes and the only one for the Mac, which I have. I need to download the nightly builds for the FT-1D, but that's not a big deal for me. I keep getting updated versions of the software, the last stable version is from last September (I think).

From: k6di@...
Topic: 358 Message: 376

Hi Doug,

I've had many of the antennas mentioned by other posts, and you won't go wrong with any of them. Of course, longer antennas generally perform better than shorter ones, at the price of being clumsier and more conspicuous. Surprisingly, I found the SMA-24, a thin wire antenna, to perform somewhat better than the heftier SRH77CA, to be less visible, and (being flexible) to be easier to deal with.

My current antenna is a Smiley 270A Dual Band http://www.smileyantenna.com/collections/dual-band/products/270a-dual-band, and it's well made, with fine performance. It has the advantage of being extendable to the length of the SRH77CA or SMA-24 when you need the gain, and as short as a rubber duck when you're close in. It's eHam.net review places it somewhat higher than the two previously mentioned. The price is quite reasonable at $23, direct from the manufacturer.

Appearance may be as important a discriminator here as performance. To echo others, though, they're all better choices than the stock rubber duck.

This is indeed a good performing antenna, but I haven’t found it to perform better than the all time favorite of many, the Diamond 77 series. However, it has a tendency to oscillate physically if one is walking with it, or otherwise not keeping it still, making it much less suitable in many cases than the 77 series. This oscillation can cause flutter on the transmitted signal, especially into a more distant repeater.

Possibly the best attribute of antennas of this type is the ability to form them into a closed loop, as though attempting to tie in a knot, but not pulling tight. Doing this puts the SMA-24 into a loop about 3" in diameter, making it easy to tuck away for use as a spare, or to keep it from tickling one's armpit while walking with the HT on one's belt.

I too like many of the Smiley products.

From: Edward Ivester
Topic: 358 Message: 378

This has been an interesting conversation. As I state previously, my favorite is the SMA124. There is a potential problem however. It as no ability to seal the SMA recepticle, so water could get in to the internals. Our club tested the gain, kind of, using a signal strength meter. We compared the Diamond SRH320A, NAGOYA NA771, and Comet SMA24. Both Comet and NAGOYA antennas indicated the same gain with the Diamond showing slightly less gain. But compared to the stock antennas (dummy loads), they all did great.
Only he NAGOYA sealed well on the SMA receptacle so it is my choice out in the field.
 But compared to the stock antennas (dummy loads), they all did great.Knowing all that, I still use the SMA124 - at least at ham conventions.

Thanks for all the input everyone, very informative. I've narrowed it down to either the Comet SMA-503 or Diamond SRH-519. But I'll probably get one of the longer antennas at a later date too!

383. Packet and CT-44

Yahoo group: FT-1D
Date: 2015-05-05 13:11:28 UTC
From: doug.mccomber@...
Topic: 383 Message: 383

I have an old AEA PK-232MBX and I want to interface it with my FT1DR. The FT1DR manual briefly mentions packet and says you can do it "by connecting TNC using an optional connection cable CT-44". CT-44 plugs into the mic port and provides a separate mic and ear port. But googling for a suitable cable (my soldering skills aren't there yet) I came across one from MFJ (http://www.mfjenterprises.com/Product.php?productid=MFJ-5020X) that has just the single jack which looks to be correct. Their page mentions it is compatible with R-series HT's.

So this MFJ cable looks to be correct and I can skip the CT-44. Does that seem right to you?

Thanks,
Doug

Hi Edward,

No special antics required. Hold down the Band key while powering on. LED will light and display will be blanked. Press the Band key again and the HT will buzz and display the base version number.

To get the DPS version, use the Dx key to put the HT in a mode other than straight FM. Selecting modes Auto FM (w flashing bar in front of FM), DN & VW will allow version to show. Then hold down the Disp key to open the menu system, scroll to 2 TX/RX, press the Ent key, scroll to 2 Digital and press the Ent key, scroll to 6 DSP Ver and press the Ent key one last time.

Date of Mfr may be available from the s/n, if you ask the service center nicely.

Yaesu year and month of manufacture can be determined from the serial number as follows:

1st character (always a number) - Year of manufacture: 3 = 2013, 4 = 2014, 5 = 2015, etc.

2nd character (always a letter) - Month of manufacture: C = Jan, D = Feb,....., N = Dec.

3rd & 4th characters (always numbers) - the lot or run number

5th thru 8th characters (always numbers) - manufacturing sequence number.

So, a serial number of 5F123456 would be for a radio made in 2015 during the month of April, which was part of Lot 12, and was the 3,456th radio made in that lot.

397. DSP Version displays a decimal

Yahoo group: FT-1D
Date: 2015-05-19 03:15:35 UTC
From: kb5hav@...
Topic: 397 Message: 397

Not sure if anyone else has seen this problem, if it is one, but, I saw a post on Facebook today where a guy, when checking to see what version DSP firmware his FT-1DR has it showed (DSP Ver .) That's right, no numbers, only a decimal. So, I was curious as to what my radio would show that I bought back in April.

When I check the Main Firmware version I get version 2.04. This is fine as it is the latest version. When checking the DSP Firmware Version, I get only a decimal. I downloaded the latest firmware and DSP updates from Yaesu's website. Even though I have the same firmware as the update, I ran the program and followed all steps to the letter. Once all that was complete, I ran the DSP update and followed all steps to the letter. Once all complete, there is NO CHANGE. Main Firmware is 2.04, which is correct, and the DSP Firmware is . , not 1.07 as it should be.

Anyone else noticed this? Anyone have any idea of what to do beyond calling Yaesu Tech Support and/or sending it back to Yaesu? I'd hate to send it back as there is no idea when I'd see it again. This is a great little radio!

Thanks in advance for answers or advice!

Sorry, make that the DSP version, not DPS.

Topic: 401 Message: 402

The Yaesu site says it's v1.02.13, but when checking Help|About after installing it, the version is still showing v1.02.11.

Also, none of the "new" files have 2015 for their date stamp, other than the ones created during installation and program startup.

Apparently someone at Yaesu messed up.

You can wideband an FT1D, I had an FT1DE made wideband. I sold it when I got the FT2DE. Then new owner is part of a rescue group and we tested it in the 160MHz range and it transmitted fine. Not that you need that frequency

I had mine done by the dealer so don't know the details, but it is possible to do

Here is the US mod:

If you remove the battery and the small round plastic cover you will notice a switch and a jumper, do not touch the switch just remove the jumper.
Put plastic cover back in place and the battery then just press and hold the band when power on the transceiver, the mode will enable TX 140.000 - 174.000 and 420.00 - 470.000 MHz.
All data will be lost and call sign as well.!
Please do this at our own risk i presume no responsibility i did it and it worked !!! :)'

As you see in my radio the only visible jumper is actually removed by me.

From: mi.emt10@...
Topic: 414 Message: 414

I am looking at purchasing an FT1DR from Giga Parts and have a few questions:

1. When running in dual channel mode from memory, are the memory tags displayed, or is that only in single-channel mode?

2. How is the mic jack? Does the mic stay in, or have problems with coming out like on the ft60r?
3. Does anyone have experience with the Yaesu ADMS-6 programing software?
4. Will the radio come with a cable to use with that software, or will I need to purchase one separately?

Thanks,
KD8RMQ

431. Still confused about auto-mode

Yahoo group: FT-1D
Date: 2015-10-22 17:25:36 UTC
From: Brian Smithson
Topic: 431 Message: 431

After several months of owning this radio I am still puzzled by the auto-modes.

I have a bunch of analog FM repeaters stored in memory in FM mode as well as aircraft freq's in AM mode.

There is one SystemFusion repeater in my area, so that is one of them. I tried to save it to a memory in "DN" mode and it seemed to go in. but then when I changed memories to the other analog repeaters, the mode stays DN! Not how it was stored.

So I hit the Dx key until an analog repeater is FM, but when I change back to the Fusion repeater it too says FM. I thought I'd stored it as DN?

Now I experiment with the auto-mode. On an analog repeater, I press Dx until it has that little bar to the left of FM - auto-mode, right?

I move the dial down to an AM aircraft frequency, and it still says auto-FM. That's ok, because when I hear a transmission it switches to auto-AM. Confusing, because in memory it was saved as AM.

Move the dial back to an FM repeater and it still says auto-AM. Again, when someone keys up, it'll change to auto-FM. While it is auto-AM I can transmit and apparently it transmits FM because when the repeater responds it switches to auto-FM.

But back to the Fusion repeater - if it is in an auto-mode and a digital signal transmits, I *think* it will switch to DN so I can hear it. But how do *I* transmit if I haven't heard a digital signal first? Press Dx until the mode is DN and then key up?

What happens when I turn the dial to other frequencies and the mode stays DN? It is not auto-DN, so when there is a signal I hear nothing.

What am I doing wrong?

Thanks for the time!

Thank you Michael!

What do you mean when you say "when I transmit will transmit as
programmed?"

I noticed in the manual after posting this that operating mode isn't even
saved with a memory.

So, if auto-FM is selected and you tune to a Fusion repeater and key up,
what mode are you transmitting in?

I can't seem to find an 'auto-DN' choice when I press Dx?

Thanks again, and 73!

You are correct. Operating mode cannot saved with memory.

If on auto mode, it just transmits as usual. If digital and repeater is digital, you will receive on digital vs analog.

At least that's the way I understand it.

I've had my FT1DR for four months and have used it that way the whole time.

We only have one Fusion repeater here in San Antonio and getting another one. Not like we have a lot of choices.

Good luck.
Maybe someone else has a better perspective on this.

Thanks,
Michael Pérez

Thank you Michael!

What do you mean when you say "when I transmit will transmit as programmed?"

I noticed in the manual after posting this that operating mode isn't even saved with a memory.

So, if auto-FM is selected and you tune to a Fusion repeater and key up, what mode are you transmitting in?

I can't seem to find an 'auto-DN' choice when I press Dx?

Thanks again, and 73!

This is very helpful, Michael!

I think, to transmit on a repeater I know to be Fusion in digital, I have to either wait for it to transmit and the radio to detect DN or set it to DN myself before I key. That removes the auto-ness of the mode.

Thank you so much for your help!

437. 12 volt power and external antenna

Yahoo group: FT-1D
Date: 2015-10-29 05:50:40 UTC
From: alekach@...
Topic: 437 Message: 437

Not sure why the manual indicates that when using an external 12 v. power supply you need to use an external antenna? One of the values of the HT is in ARES/RACES use, but with the GPS and APRS turned on you can go through batteries pretty quickly. I was thinking of using an external light weight Li rechargeable at nominal 13.8 v. carried on a belt and wired into the external DC jack of the radio to provide power during a day long event, but I am wondering if the same caution applies as with external power supplies?

S.E. Wisconsin Yaesu System Fusion Net.
Saturday Evenings 7:00 P.M. Local Time.
Sponsored By
The Milwaukee Radio Amateurs' Club.

Where:

MRAC repeater. 145.390MHz, Offset -600KHz, PL Tone encode of 127.3.

When:

Every Saturday Eveing starting at 7:00 P.M. Central.

Mixed Mode Friendly:

Analog as well as Digital users can check in, and the first go around is specifically allocated to questions, comments, and answers from and for our analog guests, in analog mode. The net then moves on to Digital Mode for the remainder of the net. We encourage those who are interested in Yaesu System Fusion products to check in.

Thanks and hope to hear you on the net!

From: Edward Ivester
Topic: 442 Message: 442

I've recently purchased a new FT-1dx and think that is just great - but.
I downloaded the latest ADMS-6 Programmer (ver. 1.0.2.15) and successfully got data from the radio. All went well. I changed some of the data and went to upload it back to the radio but the 'send' icon was greyed out as well as the 'Send Data to FT1D' in the 'Communications' tool bar. Puzzling. Another issue, in the 'File' tool bar the 'Open' is also greyed out. I can only find and open the desired file using the 'File' icon on the lower tool bar.
Any thoughts?

Ted,

I tried Yaesu’s software as well... and promptly went out and bought the ADMS software from RT Systems. It is a MUCH better piece of software.

I found the Yaesu software had several bugs that prevented me from using the USB programmer. Yes, Yaesu did help with some of that, but they told me straight up that some issues hadn’t been addressed yet, and wouldn’t be for some time. The ADMS from RT Systems eliminated any/all programming issues, and - honestly - was easier to use. In my humble opinion, it is WELL worth the money.

I have had excellent results from RT Systems' software for several of the radios I own. I have to say that the FT1D version is 4 out of 5 for me.

The Fusion system makes storing mode irrelevant. In fact, it wasn't until I did some close testing that I discovered the radio doesn't even store mode when you save to a memory. When in auto-mode, the radio figures out the mode from the signal. RT systems kind-of understands that, but there is still a mode column and, reading from the radio, it is always FM.

That's ok for that radio, but it really breaks things when I try to share chunks of memories between radios. I've suggested to RT that they come up with some sort of common-frequency database that the radio-specific apps could talk to and interpret for their radios.

RT Aside, the auto-mode still puzzles me because it seems the radio has to hear something on a channel before it knows what mode it is, and that means you can't trasnmit first unless you specifically set the mode - every time! There are a few Fusion repeaters in my area that I _know_ are fusion - I'd like to save that to memory so tuning to it and transmitting works in digital as well as the analog machines do.

I've gone off topic a bit here, but it was using RT's software that helped me discover this usability problem with the radio.

Still, RT is the best programming system out there!

73!

From: rondcole@...
Topic: 442 Message: 445

To Answer the question.

You have to Read from the radio before you can Send to the radio.

Just Don't exit from the program after you have Read the radio or you will have to start over again and Read from the radio to enable the Send to Radio button.

You can close whatever radio load you have and open another file or import a file and send that load to the radio.

That's one of the wonderful better ideas some programmer came up with since no one would want to simply send a file to the radio without first reading whats in the radio...

There's a world out there, not only windows.
I can't comment on RT software quality as I don't have any windows-pc to run it.

Anyway 50$ over 400 are 12.5% more ... quite a lot from my (empty pocket) point of view.

452. APRS ON/OFF

Yahoo group: FT-1D
Date: 2015-12-12 02:41:35 UTC
From: wd8jwj@...
Topic: 452 Message: 452

What method is being used to shut off and turn on APRS ?
I go to the APRS modem menu and shut it off.
Can you just move the freq out of the VFO ?
73, Bill, WD8JWJ

453. Re: APRS ON/OFF

Yahoo group: FT-1D
Date: 2015-12-13 23:20:53 UTC
From: ke6gyd@...
Topic: 452 Message: 453

I haven't found any quick and easy way to turn it on/off. After tuning to the APRS frequency in B Band, I just go into the APRS menu, turn on modem to 1200 and then GPS power ON. I've already set the beacon settings for the desired interval so beaconing commences once the above settings are done. I don't use Smart Beaconing, it's beyond my willingness to learn at this point with all the parameters to deal with. Then you're good to go after it locks on to the sats. Reverse to turn off. Seems to be a global setting, just like the Digital side of things on A Band.

If you leave the modem and GPS power ON, then even if you change to a different frequency either in VFO or memory, the radio will beacon the APRS packets, annoying anyone listening on the other frequency or repeater. In addition, if you don't need APRS function, by turning them off, the battery will last longer.

If someone else knows of a different, more efficient way to turn on and off APRS, or if I've got this wrong, I'm all ears.

Tnx Michael.
I have been trying to figure out what these settings do to no avail other than cause APRS to do what I didn't want it to do ???
I will make changes to only one setting at a time then test from now on. I only make short trips to town and it would not show all the turns. I don't really need APRS. It's something to play with with the new HT. We have a new Fusion on the air in town so that negated the purchase of the HT which I am happy with. They sure have stuffed a lot of stuff inside that little case.

460. RT Systems FT1D Programmer cable support update

Yahoo group: FT-1D
Date: 2015-12-27 15:19:20 UTC
From: David Piontek
Topic: 460 Message: 460

Haven't seen this mentioned in the group, though I may have missed it. I just found out in an email exchange with their tech support, and suppose there may be others in this group who are not aware.

Initially, FT1D radios were shipped with the SCU-18 cable, which worked with the RT Systems FT-1D Programmer. At some point, and as was the case when I got my FT1D, Yaesu had switched to shipping the SCU-19 cable with the radio - which did NOT work with the RTS Programmer. The alternate solution was the RTS option to get the software with a USB card reader and microSD card. The Programmer can also save programmed channels and settings to a file on the card, which could be imported from the card when it was inserted into the radio - a multi-step process not as convenient as using a cable, and in my experience limited to a single file on the chip.

What I just now discovered is that the RTS FT1D Programmer has been updated and now DOES support the SCU-19 cable. Good news if you have that cable and thought it was just excess packing material. In case someone does not have either SCU-18 or SCU-19 supplied by Yaesu, they also sell the RTS equivalent cable, the USB-68. See https://www.rtsystemsinc.com/FT-1D-programming-software-and-USB-cable-s/2244.htm

BTW, the software update can be run from within the software while it is running, or from a trouble shooting page on the RTS web site at http://www.rtsystemsinc.com/kb_results.asp?ID=13

Thank you, David, for getting this to us. It's very good news.

I have an earlier FT-1D with the SCU-18 cable, and a later one that came with the SCU-19.

A friend with an SCU-19 came over to program his FT-1D. My app would not recognize the SCU-19 so we used the SIM card for the initial transfer. For some reason, the digital modes on his rig were inop after the SIM card transfer. When we transferred through my SCU-18, it worked fine.

I just now updated the app and tried the SCU-19 in my newer rig It worked fine.

Happy New Year!

David,

Thanks for the heads-up on this! I had this "particular" problem - my cable didn't work with the RTS software, but the USB did - so I'm happy to know that with the upgrade my cable will work now and I don't have to plunk down $$$ for another cable.

I am not English but the way i understand the manual is...

Yaesu don't knowing details about your external PSU about any RFI problem prefer to say you to use an external antenna reducing any RFI problem inside the PSU because this one will be far away from the external antenna.
Of course, with a Li battery, no RFI problem at all, then the warning could not be apply.

And sorry for my Frenchy English, hi !

475. Programming the FT1XD

Yahoo group: FT-1D
Date: 2016-01-07 17:55:49 UTC
From: wd8jwj@...
Topic: 475 Message: 475

Whew! What an exercise in IT land. Took me two days to finally get things to go. Had a heck of a time figuring out the SD card/reader thing. Went right to RT Sys web site and brought up the video and followed it and it still took four shots at getting the file from the computer to the radio. Almost scared to try it again. Both radios always go to the first Freq entered in the program file and with squelch off. Took some doin' to get it quieted down.
Tried the Yaesu supplied -19 cable first and it wouldn't work, or so I thought. Next tried a regular USB cable and it wouldn't work either, or so I thought. Now sometime I will have to re-visit the whole process to see where I'm right and wrong.
I have pushed the buttons more than I have talked on the radio. ???
I guess it's just part of the FUN of ham radio in 2016.

Bill,

See my 12/27 post about cable support update,
pasted below for reference. My SCU-19 cable does
work now, yours should too if you are running the
most recent updated version. 73, Dave/KV7I

Date: Sun, 27 Dec 2015 07:19:20 -0800
Subject: [FT-1D] RT Systems FT1D Programmer cable support update

Haven't seen this mentioned in the group, though
I may have missed it. I just found out in an
email exchange with their tech support, and
suppose there may be others in this group who are not aware.

Initially, FT1D radios were shipped with the
SCU-18 cable, which worked with the RT Systems
FT-1D Programmer. At some point, and as was the
case when I got my FT1D, Yaesu had switched to
shipping the SCU-19 cable with the radio - which
did NOT work with the RTS Programmer. The
alternate solution was the RTS option to get the
software with a USB card reader and microSD card.
The Programmer can also save programmed channels
and settings to a file on the card, which could
be imported from the card when it was inserted
into the radio - a multi-step process not as
convenient as using a cable, and in my experience
limited to a single file on the chip.

What I just now discovered is that the RTS FT1D
Programmer has been updated and now DOES support
the SCU-19 cable. Good news if you have that
cable and thought it was just excess packing
material. In case someone does not have either
SCU-18 or SCU-19 supplied by Yaesu, they also
sell the RTS equivalent cable, the USB-68. See
https://www.rtsystemsinc.com/FT-1D-programming-software-and-USB-cable-s/2244.htm

BTW, the software update can be run from within
the software while it is running, or from a
trouble shooting page on the RTS web site at
http://www.rtsystemsinc.com/kb_results.asp?ID=13

Tnx David.
I went to the Programmer and clicked on get up dates. Then had to close the program while a bunch of updates took place. Now when I get brave I"ll get the -19 cable out and give it a try.
I also think that if you leave the SD card in its slot and make changes to the radio and then turn it off, that when you turn it back on everything changed goes back to all the original settings that are on the SD card. So if you want to save all the new settings you must go to the menu for the SD card and "write to SD card". Then take the card out and store it.
I'm wearin' out my manual.

478. Anyone using GM (Group Monitor)?

Yahoo group: FT-1D
Date: 2016-01-12 16:20:16 UTC
From: Bob K0NR - email list
Topic: 478 Message: 478

I've been playing around with the FT-1DR and its GPS features.
Right now, I am using a pair of FT-1DR's to maintain contact while
hiking and doing SOTA activations.
The digital mode with position embedded in the transmission is pretty
handy for that.

It would seem that the Group Monitor (GM) mode would be useful as well.
So far, I have found that GM is mostly useful for running your battery
down quickly :-(
Is anyone actually using the GM function? If so, what for? Any tips?

Hi Bob,
I believe it is one of the Bells or Whistles of the radio. I have turned it on while two or more stations are in QSO and I can see the distance to them. I believe it sends out a short packet to see the other radios. Probably why it'l eat up the battery. I leave it off. Maybe would be of value in a high radio density area, but not here with only four C4FM'ers on the repeater.
And then there's the Frequency memories, Gads!

480. Speaker Microphone

Yahoo group: FT-1D
Date: 2016-01-13 03:50:37 UTC
From: wd8jwj@...
Topic: 480 Message: 480

I purchased the Yaesu speaker/ mic. The speaker leaves a lot to be desired. Much worse than the HT's speaker. With the Sp[/Mic single 4 cond jack it's all or none. I would like to have the microphone with an external speaker. Looks like I am going to have to make a cable to do that. I just happen to have a couple 4 conductor jack pigtails. I know there is a jack on the Microphone, but not a good place to plug in an external speaker or headphones. Where the mic goes the speaker/headset goes.
This set-up is for the vehicle. I am wondering if there is an input to the vehicle's audio system. I will have to check on that.

From: pmo75@...
Topic: 480 Message: 481

Hi Bill,

An option could be to buy a cheap Chinese compatible mike for the FT1 on ebay or other place, to cut the cord near the microphone and use the remaining jack + cord to input in a small junction box where you could fit standard plugs for mike and external speaker (the real problem is the jack and if possible the cord, there you have it, no more problem).

Another option could be to buy a small external speaker and to use the cabinet of it to directly input the previous jack+cord and to fit the standard plug for the external mike on it.

I hope your understand my bad English, sorry. ;-)

It is the Yeasu MH34. I see my 2014 Jeep has an AUX jack. I will dig out the manual and see what that will do. It may solve my speaker needs by using the vehicle's sound system. Not sure how that is going to be with APRS beacons. APRS beacons coming thru over the cars radio may not set well with the XYL ???
I do have a four conductor jack plug to break out the speaker/ microphone output from the radio.
I bought cup holder mount to hold the radio, but first I have to modify it to accept the HT, for easy on easy off.

You can also purchase a Yaesu CT-44 adapter that splits the mic input and speaker out. They're around $15. Just find/purchase/ebay a two pin Yaesu or compatible mic and plug in the mic pin to the adapter and leave the speaker part out. Then plug in an external speaker into the other part. See attachment.

As for the XYL, create three APRS memory channels. I leave one open to the APRS Hz, put a 100hz tone decode/CTCSS on another (Call it Voice Alert), and then a DCS tone on the third (call it APRSmute). Then if your are squawking APRS, you won't hear any packet bursts on the VA or mute channels. VA is used to contact another on the APRS frequency with voice. It turns on your speaker when another transmits the 100 Hz nationwide tone looking for a contact. If contact is made, move to another Hz to continue the conversation. It's like another calling channel like 146.520, for for the APRS community.

Hope this helps.

Topic: 480 Message: 485

Tnx Bob, I did see that also. Just got done checking out the AUX input on the vehicle. Looks like that isn't going to work. When AUX is selected it cuts off the radio and all you get is, well, nothing, unless someone is talking to you thru the HT.
Now to decide whether to make a cable or just buy Yaesu's. I have the jack for the four prong mic plug to use the Yaesu mic. Then will need a small speaker. Or maybe, wait for the Hamfest in March.
I think I do more fiddling with projects than I do operating. Too Much Fun

Topic: 480 Message: 486

Bill,
Just read something on another yahoo group post that may be the ticket for you.

To confirm, looks like you want to run mobile using the ht with an external mic and external speaker.

Using the mics available today with the external speaker jack on the bottom of the mic, just connect a 3.5mm cable of sufficient length to the bottom of the mic jack and coil the wire inside the mic cord down to the ht, then run to the external speaker. That way, you don't need to have the cord dangling from the mic to the speaker or, unless you really want to, make or purchase the adapter.

Then run voice, APRS, or whatever you wish.

I also highly recommend the RTS software. With the latest version of software (update from within the software while it's running, or from a page on the RTS website), it now works with the Yaesu SCU-19 cable that is supplied with the radio, so you do not need to buy the RTS cable. You can do the micro sd card of course, but its a bit tedious and has some limitations.

503. ARS UHF issue or operator?

Yahoo group: FT-1D
Date: 2016-02-03 20:06:50 UTC
From: alewien5000@...
Topic: 503 Message: 503

Hello everyone,
I'm getting to know my new FT-1DR and the group has been a good source of knowledge so far. My current question is on the behavior of the ARS function. If I enable ARS the HT wants to shift 446.000 as if it were a repeater frequency. Has anyone else noticed this? I have other Yaesu radios that seem to handle ARS for UHF frequencies just fine. ARS for VHF appears normal and helpful but I can't make sense of it on UHF.

Thanks in advance,
73's, KD0TQT

From: Mark Thompson
Topic: 505 Message: 505

We have confirmed with the Dayton Hamvention Forums Chairman
that the System Fusion Forum at the 2016 Hamvention will be
on Saturday, May 21st at 9:15 am in the second largest forum room.

Last year, 2015 the first System Fusion forum was on Sunday morning at 10:30 am in the largest forum room and
the room was nearly full with around 300 in attendance so it's likely this year the forum might be standing room only.

We anticipate Yaesu will be presenting at the forum and taking Q&A.

If you would like to give a brief presentation at the forum regarding some aspect of System Fusion
please email me directly with Topic & Brief Description.

As more details regarding the forum become available
they will be posted on the Yaesu System Fusion yahoo group.
If you're not a member of the group you can join at the link below.

The rubber port covers. Difficult to plug in speaker mic at same time power cord is plugged in. I want to have the cords exit to the rear, but that is nearly impossible. Straight plugs vs angle plugs would work better, BUT. Thought about cutting off rubber covers, but really don't want to do that.

Volume control takes two hands. If you don't change the volume you end up muting it. Or you end up pressing the wrong button for volume. Not a good thing if mobile.

Neither of these affect the operation of the HT, but do make some actions difficult.

508. FT-1DR Firmware Update

Yahoo group: FT-1D
Date: 2016-02-27 22:53:14 UTC
From: shinysideup@...
Topic: 508 Message: 508

Hi to the Group,

I have a question. Seeing that the other Fusion radios have all had DSP software updates, why will there not be any updating the DSP version on the FT-1DR?

I am not sure if it is not possible or are there other reasons? Just curious. It seems to me that from what I understand the FT-1XD is basically the same radio as the FT-1DR, except for enhance GPS module and larger battery. The FT-1XD however comes with an updated version of the DSP software- (ver. 4.10) per an FT-1XD owner.. If so why can't the FT-1DR be updated as well? Anyone have any idea why Yaesu isn't going to release Firmware and DSP updates for this version Radio?

Thanks,

Rock

Topic: 509 Message: 509

S.E. Wisconsin Yaesu System Fusion Net.
Saturday Evenings 7:00 P.M. Local Time.
Sponsored By
The Milwaukee Radio Amateurs' Club.

Where:

MRAC repeater. 145.390MHz, Offset -600KHz, PL Tone encode of 127.3.

When:

Every Saturday Eveing starting at 7:00 P.M. Central.

Mixed Mode Friendly:

Analog as well as Digital users can check in, and the first go around is specifically allocated to questions, comments, and answers from and for our analog guests, in analog mode. The net then moves on to Digital Mode for the remainder of the net. We encourage those who are interested in Yaesu System Fusion products to check in.

Thanks and hope to hear you on the net!

Bob

What makes you think there won't be an update? In my experience with other Yaesu radios they've been pretty good about software updates when they're warranted.

513. UPDATE: System Fusion Forum at Dayton Hamvention on Saturday, May 21st @ 2:30 - 3:30 pm in Forum Room #3

Yahoo group: FT-1D
Date: 2016-02-28 23:20:03 UTC
From: Mark Thompson
Topic: 505 Message: 513

The Dayton Hamvention Forums Chairman has notified us that
the System Fusion Forum at the 2016 Hamvention has been rescheduled
to Saturday, May 21st at 2:30 - 3:30 pm in Forum Room #3.

Last year, 2015 the first System Fusion forum was on Sunday morning at 10:30 am in the largest forum room and
the room was nearly full with around 300 in attendance so it's likely this year the forum might be standing room only.

We anticipate Yaesu will be presenting at the forum and taking Q&A.

If you would like to give a brief presentation at the forum regarding some aspect of System Fusion
please email me directly with Topic & Brief Description.

As more details regarding the forum become available
they will be posted on the Yaesu System Fusion yahoo group.
If you're not a member of the group you can join at the link below.

514. QSY Info placement

Yahoo group: FT-1D
Date: 2016-04-04 18:02:49 UTC
From: frankmhowell@...
Topic: 514 Message: 514

Hi,

I just got a new FT1XDR...and have two FTM-400DRs. On APRS the FTM400's have a menu option for the Frequency on VFO A to be automatically inserted into the Beacon. I've found that on or about Page 42 of the APRS Manual for the 400DR.

However, the FT1DR/XDR APRS Manual portion on the STATUS TXT (Page 30ff) only gives a general set of instructions for inserting "text" into the STATUS TXT. My questions are:

a. Can the FT1XDR automatically transmit the VFO A frequency/tone/offset info;

b. OR is it just a manually set static frequency/tone/offset string?;

c. If a, what paramters are entered in the BEACON TXT (or anywhere else, if that's the case)?

73,

Frank
K4FMH

Frank -

- Good questions, and I'm glad that you asked. This is a very useful function if it is done correctly.

"However, the FT1DR/XDR APRS Manual portion on the STATUS TXT (Page 30ff) only gives a general set of instructions for inserting "text" into the STATUS TXT. My questions are:

a. Can the FT1XDR automatically transmit the VFO A frequency/tone/offset info;"

-> No. It has to be done manually.

"b. OR is it just a manually set static frequency/tone/offset string?;"

-> It is.

"c. If a, what parameters are entered in the BEACON TXT (or anywhere else, if that's the case)?"

-> To transmit a beacon that will permit automatic QSY or tuning by Yaesu or Kenwood mobiles (FTM-400, TM-V710G, etc) your BEACON TXT string begins immediately, as an example,

442.300MHz T107 +500 (followed by any additional info).

The frequency - tone - split must be in that format:
###.###MHz T### +###

(with that exact set of two upper case MH and one lower case z as "MHz")

The PL tone is just the whole frequency in Hz (the decimal is redundant and is dropped). T107 indicates that the tone 107.2 is necessary to access the repeater or station. C107 would indicate that the station transmits a PL tone of 107.2 and 107.2 is also necessary to access the station.

The split, or offset, is "+" or "-" followed by the offset in MHz. +500 or -500 is common for 70cm, and +060 or -060 is common for 2 meters. If the other station is set to use the standard offsets, it is not necessary to include them, but you don't know that from the start.

The FTM-400 will read that string when you press QSY, and will tune the A channel VFO to that frequency, tone and offset. The Kenwood TM-D710G will do the same by pressing "Tune." Both radios can automatically insert all of that data into their transmitted beacon string.

The earlier TM-D710 will automatically insert only the frequency into the beacon string. It will automatically tune only to the frequency that it reads, not the tone and split. I believe the Kenwoods are more flexible regarding format, but I think it best to use the format that will work with the most configurations.

A fixed APRS station can also transmit repeater objects so that the FTM-400 and TM-D710G can tune to them. Our repeaters in the Annapolis, MD area transmit the object name as, for example, 442.300MD. The beacon status text is the same as above:

442.300 MHz T107 +500 C4FM KB3CMA

You can search in ww.aprs.fi for 44?.???MD and see the 70 cm repeater objects in Maryland, or 14
?.???MD for 2-meter repeaters. Unfortunately, not all use that format for object names or QSY strings.

Comments are welcome.

You have to type that in after your callsign. Out a some or dash between the two, but not both due to lack of space.

Gordon,

Thank you so much for your responses!

So the FT1?DR has only a manually added "static" frequency option. Am I correct in reading my FTM-400DR manual that the '400 has the ability to AUTOMATICALLY insert VFO A's frequency, offset and tone into this BEACON TXT string? So the '400 has an enhanced capability in this regard?

Yes, Frank, it does.

The instructions to set it up are in Page 42 of the APRS Manual.

"Attaching Status Text to a Beacon."

If you are entering data for a repeater that you monitor, it helps to enter the call sign of the repeater after the automatic offset field (insert one space between each field following the offset.

In my experience the only thing that the TM-D710G will do that the FTM-400 will not do is cross-band repeat (with analog FM, of course).

Hi,

with regards to APRS and QSY info, does anyone
know if the FT-1D supports APRS "Voice Alert"?

It's basically adding a CTCSS to the beacons so
you only hear "local" squawks (not digipeated ones)
and then you can do a quick voice call
on the APRS freq. akin to "Voice alert, voice alert,
this is VK3ZZZ please QSY to XYZ"
and then the person nearby using APRS with
the official Voice alert CTCSS tone will get the message.

Details here:
http://www.aprs.org/VoiceAlert3.html

The threads linked below suggest the YAESU doesn't allow CTCSS
menus when the APRS modem is turned on, which would be
a shame, unless they fixed it in a firmware upgrade?

http://ham-gear.com/yaesu-ft1dr-aprs-notes/
http://forums.radioreference.com/amateur-radio-data-transmissions/223146-aprs-voice-alert.
html

Thank you for your advice.

Hello Corwin,

Thank for letting us know about voice alerts. I have turned APRS on my FT1XD and receive lots of stations. Presently I do not show up on the APRS map but that is another issue. I did check signaling on 144.390 the USA APRS frequency. Menu 4 signaling, menu 11 tone squelch, menu 12 tone squelch frequency. It was set to 100 the tone for ctcss in the USA. That should give you voice alerts.

Can anyone confirm since I cannot test it myself.

Hi Tim

Thank you for confirming those menu settings are available
for APRS Voice Alert (tone Sql).
In my "AUS" version FT1D (not FT1XD)
the option 4 SIGNALING, menu 11 SQL TYPE
is forced to "OFF" and cannot be changed
when the APRS modem is turned on.
I'm not sure if it got fixed in the "X" version
or if it is due to the USA/AUS export model behaviour.

Cheers, Corwin VK3FLIC

Topic: 527 Message: 528

There is not a specific setting on the FT-1DR to transmit with one PL tone and receive with another, but you don't need that. As I understand your question, the repeater requires one PL tone on its receive frequency, and superimposes a different PL tone on its transmitted signal. I assume that you are dealing with an analog FM repeater, not a digital signal, because System Fusion does not use PL tones with digital signals.

If you transmit to the repeater with the PL tone that it wants to hear, it will repeat your signal with its different transmit PL tone.

Go to the menu: 4-Signalling, 11-SQL Type, TONE (Tn) and ENTER that setting. Then back up to 4-Signalling, 12-TONE SQL FREQ, select the PL tone that the repeater wants to hear, and ENTER that tone. Do NOT set TSQ. Your radio will receive everything from that repeater and any others on that frequency within range. As long as your radio hears everything, it doesn't care what PL tone is transmitted by the repeater.

Now, say another repeater on the same frequency transmits with the tone that you have set for transmit, and you want to block those signals while MONITORING your repeater. You can set another memory channel (probably adjacent, for easy tuning) with Tone Squelch (Tsq, TX and RX) set, to receive only the transmit signal from your repeater. Then you have one memory set for monitoring (but not transmitting), and another memory set on the same frequency pair for communicating (TX & RX).

If it is a System Fusion repeater, your monitoring memory set will not hear the noise from a digital signal, because it is transmitted with no PL tone. But you can set Automatic Mode Select ON and you will hear the digital signals as voice.

Thanks for the reply.
I need to run tone squelch at my house because of the local interference causes the scan to stop.
So I will set it up as you recommend with 2 channels adjacent to each other and see how that works.

I updated my FT-1DR's today after spending some time trying to figure out the instructions, printed vs application screens. They don't play nicely in a few spots, so maybe this will be useful.

The Main Firmware Update Instruction Manual is OK. It explains steps that are not obvious in the app screens. Particularly, it does detail the procedures for "ALL RESET" and for checking the Version Number when you finish.

For "ALL RESET," press and hold [Dx], [GM] and [ENT] keys while turning the transceiver ON.

Press [F] and you will be asked for your (Digital) call sign.

Power OFF and ON, then enter the call sign and restore your memory settings. You did remember to save them to the SD card or in a computer file, didn't you?

The DSP Firmware Instruction Manual isn't quite as good. The on-line instructions don't mention anything about removing the battery pack and AC adapter before connecting the data cable (SCU-18 or SCU-19). The instructions only tell you to look in the PDF file for details.

In step 3, the on-line instructions tell us to "Turn the transceiver on in C4FM-DSP F/W write mode," whatever that is.

The Manual tells us to "Press and hold [A/B] key for over one second to turn the power ON and press the [F] key to check that DSP WRITE is blinking."

The missing step here is the power switch. [A/B] does not turn the power on. Press and hold [A/B] AND [Power ON] for over one second, and you will be in the correct mode. Then click on UPDATE on the screen and you are on your way. That instance was the only real failing in the instructions. Other than that, my advice is to make sure that you have the PDF manual close at hand (I printed mine) and read back and forth between the manual and the screen while you are going through the steps.

I don't have anything on the FT-1XDR procedure and I don't know yet what, if any, obvious changes have been made with the updates.

73,
Gordon Davids / WJ3K

Gordon,

Thanks for pointing out the inconsistencies in the instruction. Sometimes those of us who can figure out what should be and what is don't take the time to help make things clear and correct simple things that make things frustrating for some.

I am sure your post will help many out there who have followed instructions to the t, even if they are not quite completely accurate.

Thanks for taking the time!

Bob,

Hello All,

I had my radio working APRS like a champ for a while, but now, dispite running down the start up list I can no get it to link up. The GPS works, its on the right Frq. (the Node/Repeater is about 600m from my house, so I know I can hear/hit it), but it is 1) no "reading" what is coming over (I am getting the static packets I can hear but nothing else) and it is 2) not transmitting my info/location.

Thoughts?

From: Ron
Topic: 532 Message: 533

At any time you can transmit a beacon manually by Pressing "F" then "9" and the radio should transmit a beacon.
Check what Beacon TX Mode the radio is in. My guess is its in Manual.Press "F" then "0" and see what icon is in the Station List. Press "F" athen "BAND" to change modes from Manual to Auto to Smart Beacon.

See page 26 of the APRS Manual for details.

Hi all,

after updating my FT-1DE to DSP 04.10 I check the DSP Version Number, it shows only a dot.

The fix is simple :
Turn the Radio OFF and unplug the Wallcharger. Put in Batterie and turn Radio ON.

Check the DSP Version again, it shows the correct Versionnumber (4.10)

There is none. My only complaint with any of these Fusion radios.

What the hell was Yaesu thinking leaving out that functionality?!?

No digital audio - solved

Just a followup in case anyone else sees odd behavior after a firmware update. I had recently updated the main f/w and (I thought) the DSP f/w. Turns out I had conflicting versions in the radio. Yaesu wanted me to return it for service because they didn't have any idea what was going on. I would just say,,,,, the update instructions for the main f/w are fine, but the DSP update instructions ought to be refined a little bit.

544. APRS output to a pc

Yahoo group: FT-1D

546. APRS Mute to fully working

Yahoo group: FT-1D
Date: 2017-01-06 12:53:50 UTC
From: doug.mccomber@...
Topic: 546 Message: 546

I have APRS Mute turned on which works for all packets except a DE of my own call sign. When that packet is received mute is off briefly followed by a beep. Then mute goes back on. Under Ringer I have everything off except weather, msg, grp and my msg. Turning my msg off doesn't solve the issue either (wouldn't expect it too but you never know).

So is this "normal" behaviour, am I missing a setting, or do you think it is a firmware (I'm on the latest) bug?

Is there a way to download APRS data from the radio or to the SD card in the radio? I know you can dump the GPS data, but I want the APRS data.

Thanks.

552. Won't work on SharkRF Hotspot

Yahoo group: FT-1D
Date: 2017-07-03 13:55:44 UTC
From: ad5md@...
Topic: 552 Message: 552

I used to be able able to communicate on Fusion with my HT and the SharkRF but this morning I can no longer do it. Checked the previous settings, mode on DN, simplex, correct frequency (verified with hotspot settings), hotspot set to C4FM. I did not change anything on the hotspot. Tried with my DMR and it does communicate with the hotspot and was able to qso.

All I did last night was use the RT Systems software to read the data from.the HT & followed the instruction to turn off the tcvr after. I did a full reset, set freq, simplex, DN mode but still won't work.

What am I missing? Tnx

566. FT1DR; Cannot read SD card after firmware update

Yahoo group: FT-1D
Date: 2018-01-09 16:51:39 UTC
From: w1wv_denis@...
Topic: 566 Message: 566

Has anyone witnessed this issue with recent firmware update of FT1DR?

Updated firmware and DSP to version 3.01 and 4.51 respectively. Updates performed per instruction without issue yet when restoring memories from SD card, HT will not read the card. Same card is readable through RT software on local PC. Also tried downloading memories via scu18 cable and receive error saying “file does not match”.

Thoughts?

Denis, W1WV

567. Re: FT1DR; Cannot read SD card after firmware update

Yahoo group: FT-1D
Date: 2018-01-10 01:45:56 UTC
From: ke6gyd@...
Topic: 566 Message: 567

Cannot restore memories from a card that had settings from prior to the update. Will have to reformat card in radio then load new memories from the RT software to the card then to radio.

OR load to radio via programming cable.

You may need to read from the radio first via the cable or with a reformatted card, save settings to card in radio then read from the card in RT. RT also must have the latest update for this to work.

Hope this helps

569. FT-1DR internal speaker problems/replacement?

Yahoo group: FT-1D
Date: 2018-01-11 13:37:16 UTC
From: zm1267@...
Topic: 569 Message: 569

Hi all, I experienced a failure of the internal speaker and was wondering if anyone has experienced the same thing. I did a quick search and couldn't find anyone selling a replacement speaker - any suggestions OTHER than Yaesu? I was thinking a speaker mic might use the same size unit... (P/N SP0001 in the service manual).

FYI - the symptoms I experienced was an intermittent "chatter" on audio which would only last a few seconds and then clear up. Finally one day in the mobile while listening to NOAA it just quit. If I gently pressed on the face of the radio it would come back to life, so I knew it wasn't a transistor or something. After removing the speaker I tried to repair the break, but it was under the rubber compound they use for securing the wires to the voice coil. I took a couple of pictures if anyone would like me to post them.

A possibility may be that some grit has gotten into the voice coil gap, initially causing restricted, then finally complete, lack of movement. Have you inspected the speaker with that in mind?

Hi Dennis,

That possibility never crossed my mind because it's not a "typical" construction speaker - it's designed with waterproofing in mind by the looks of it, and there's also a rubber gasket that sits around the outer perimeter of the voice coil. Any dust or dirt that would enter through the radio grill would just sit on a smooth surface.

The wire was definitely broken under the adhesive/rubber compound. I was hoping I could've patched it together, but it's just too short & delicate.

572. Re: [FT-1D] FT1DR internal speaker problems/replacement?

Yahoo group: FT-1D

From: Dennis Griffin
Topic: 569 Message: 572

Yes, I wondered if the speaker might be sealed, since I've never had mine opened up.

It just seemed odd to me that what is likely a stranded copper wire, albeit tiny gauge, would break of its own accord, snuggled away in confined quarters, especially since you mentioned that it is potted at its connection with the speaker.

Must be some little grinch running around inside your FT1DR looking for weak connections to tug on, hi. I've carried HT's on motorcycle & bicycle handlebars for decades and never had a failure due to something vibrating loose or apart.

Sounds to me like this should be covered by warranty, even if outside the coverage period.

From: thepixelated13@...
Topic: 574 Message: 574
Attachments: 1 described; binary payloads are missing from this source WARC

I just updated my FT1D to Main 3.01 and DSP 4.15 (both from 09/08/2017). I'm running a 2017 iMac (High Sierra 10.13.3). The firmware & DSP updates went fine on my Windows laptop. Now, I have normally used my iMac (previous was a early 2009 iMac running various OS X versions) and the daily builds of Chirp to program my FT1D. Never had an issue.

After doing the two updates and running the latest version of Chirp (currently 20180210) I get the following error when I try to upload my memories back to the radio: "failed to communications with the radio: radio did not ack block 1".

I'll attach the dbug log if that's any help. I'm not a programmer, but I can look through logs and code (do that at work), but I don't see anything that says "HEY! THIS IS THE ISSUE RIGHT HERE!". Maybe that is something for the people at Chirp to look at.?

Did anyone else have this or similar issue?

Thanks.

575. MH-85A11U mic/camera and Georagged Photos

I'm able to take pictures using my FT-1D and the MH-85A11U mic/camera. The GPS is turned on. However, I don't see the embedded map coordinates in the photo's metadata. Has anyone been able to take a picture and automatically embed the GPS coordinates? Scott

Just as a follow-up I ordered a replacement speaker, P/N M4090217 which solved my audio problems. At $1.67 each, I ordered a spare just in case this happens again. I bought an external speaker on eBay in case it had the same size speaker inside - it does not. I will, however, be using the external speaker in the car from now on. It's much easier to clip that speaker wherever I want to than to move the radio around, which is on an external antenna. I don't want the antenna jack to break next!

I also bought 2 extra keypads, P/N RA135900B. I don't need one yet, but at $3.18 each and it's an item that wears out, I thought that might be a good choice as well.

73,

Larry

577. Programming with a Macbook Pro

Yahoo group: FT-1D

From: nipentuck@...
Topic: 577 Message: 577

Greetings,

I have searched the archives, and could not locate a thread on this topic.

Does anyone have a suggestion to programming Yaseau radios (FT 897D and FT1-D) with an Apple Mac Book Pro, running MAC OS 10.13.5 High Sierra?

It's been a few years since I programmed them, with a rented Windows laptop (don't recommend doing that again); and I will be taking a road trip in Sept/Oct time frame, and would like to use both.

Thank you in advance for your time.

Tony

Have you tried CHIRP? It supports this radio and works great.

I've been using CHIRP on my 2 iMacs to program my FT-1D since I got it over 3 years ago.

I've used both CHIRP and RTSystems software to program the FT1XDR.

After you program it, get a radio check on important frequencies, and
do frequent backups of your configurations. There were several times
where Chirp caused transmit frequencies to be off by 800Khz on some memories,
different from the value on the display, verified with a scope. There were also
times where the radio would lockup, spewing strange characters on the display.

In both cases a factory reset was required, and use of an older backup.

The frequency shift problem was only observed once using RT Systems.

I'm not advocating either software as a result, just be sure to double
check your changes.

imho,
-craig

OK. I'm still new to amateur radio. When I transmit with my FT1DR on 446.750 Simplex everything works as it should, if I move up to 446.775 I can receive the signal but no audio comes across

There are a lot of questions that immediately come to mind for me. #1, the subject line indicates "transmitting" but this sounds more like a receiving issue if I understand the description.
First, when on 446.750, what mode are you operating in? FM, DN, VW, what?? If you were operating DN, and now another station is operating FM, unless you have the radio set for Auto Mode Select (AMS), you WON'T hear anything.
Also, if, for some reason, you were operating FM mode plus have a PL selected for decode (RX) you again won't hear anything unless they are transmitting the proper PL code (digital or tone).
Simplex operations work best when you apply the KISS principle - "Keep It Simple, Stupid." I'm NOT implying you are stupid, but rather that there are a plethora of issues/settings that can affect reception of a signal. You indicated you're a newer licensee, so these may be things you're not quite familiar with yet.
Can you see the signal meter on the radio? Does it indicate there IS a signal present, but you just can't receive it?
If so, check ALL the settings (mode, PL, etc.) on your radio, and make sure the other station matches them EXACTLY. Otherwise, you will not be able to communicate.
Good luck and 73!Mark - N9WYS

Thanks for the reply. I'm using FM mode and not using +/- . I'm pretty sure its some other setting I'm missing. I can receive on my other HT on 446.750 but not 446.775. Yes my other HT is set to the correct frequency.
